

9. Floodplain (fp), terrace (t2), alluvial fan (f), oxbow (ox), and glacial till (m) deposits. View looking southwest at the lower Animas River valley just north of Durango, Colo. The low-lying ridges (left of photo center) are end moraines. The prominent ridges in the background are hogbacks of resistant Cretaceous sandstones, and are part of the Hogback monocline that forms the northern edge of the San Juan Basin.
