

Figure 1. The location of long-term moorings in western Massachusetts Bay (Site A and Site B). The Site A mooring is about 1 km south of the new ocean outfall in about 33 m water depth. The mooring at Site B is in about 22 m water depth. See figures 4 and 11 for more detailed site maps. NDBC 44013 is the location of the National Data Buoy Center discus buoy where ongoing observations were obtained. Meteorological observations prior to 1994 were obtained from the Large Navigational Buoy maintained at Site A.
