

**WESTERN MASSACHUSETTS BAY
LONG-TERM MONITORING
SITE B (1997 - 2001)**

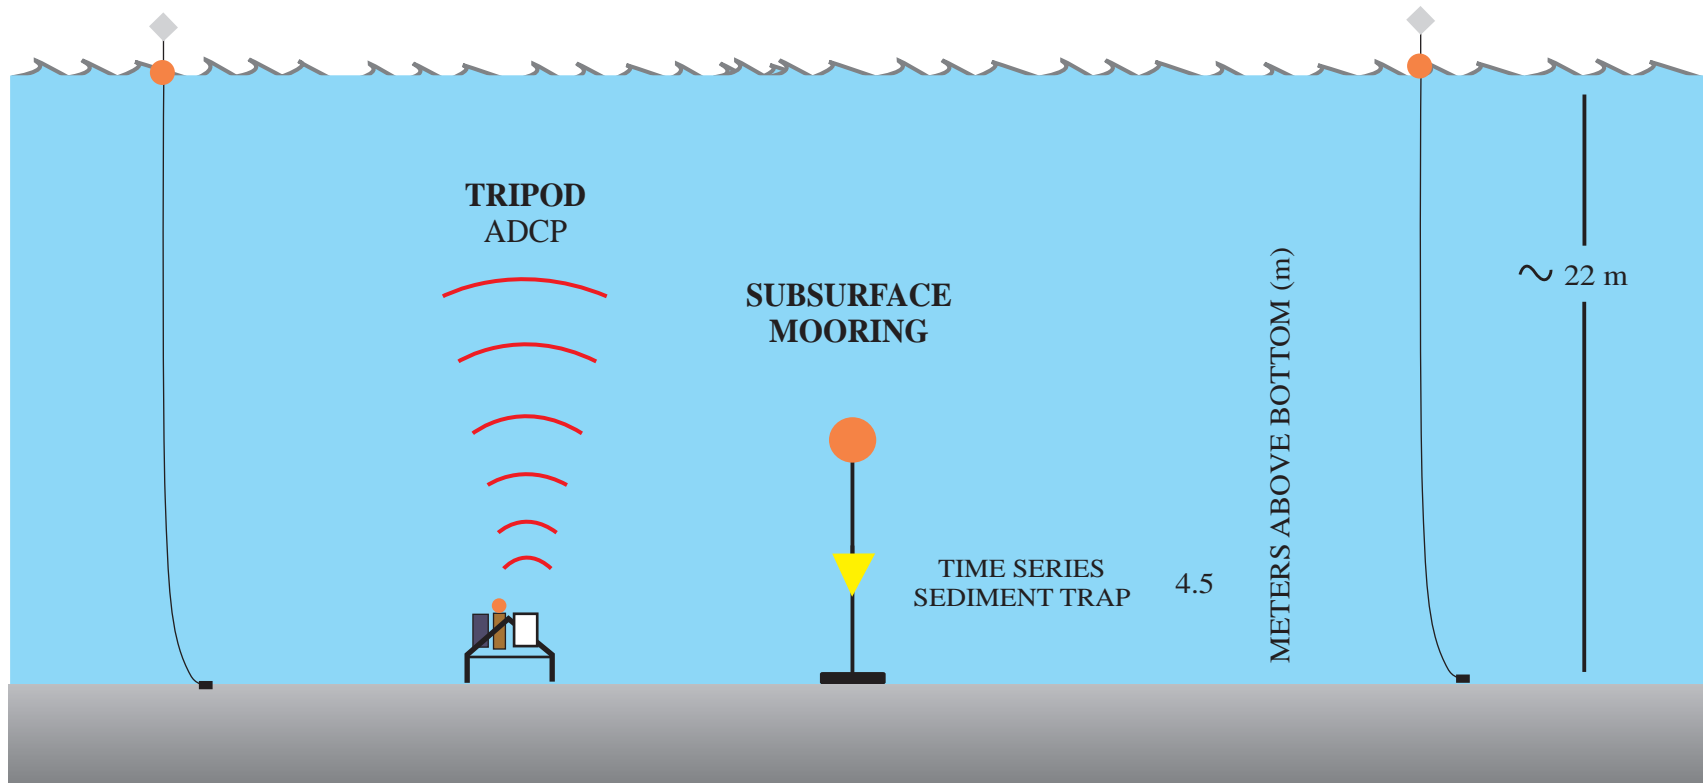

Figure 9A. Schematic of moored instruments deployed at the long-term western Massachusetts Bay Site B (figure 1 and figure 11b) from 1997 to 2002. During this period, instruments were deployed on a subsurface mooring and on a bottom tripod system. The Acoustic Doppler Current Profiler (ADCP), mounted on the bottom tripod, obtains a profile of current throughout the water column in 2-m bins.
