

ABBREVIATIONS USED – Major ions (data source: Pennsylvania Department of Environmental Protection North-Central Regional Office)

WELL AND SAMPLE IDENTIFIERS (file last modified September 2007)

LOCAL – Local number used to identify well or spring. For North-Central Regional Office (NCRO) it consists of the owner name and number.

STAID – Station identifier. For NCRO it consists of NorthCen plus a sequential number.

SOURCE – Pennsylvania Department of Environmental Protection North-Central Regional Office. Samples collected for permitting of public supply wells.

DATES – Date the sample was collected.

LAT – Latitude of well in degrees, minutes, and seconds, in format DDMSS, is not available per request of NCRO.

LONG – Longitude of well in degrees, minutes, and seconds, in format DDMSS, is not available per request of NCRO.

DLAT – Latitude of well in degrees and decimal minutes and seconds, in format DD.MMSS, is not available per request of NCRO.

DLONG – Longitude of well in degrees and decimal minutes and seconds, in format DD.MMSS, is not available per request of NCRO.

CNTYC – County where well is located. For the NCRO, the counties are Bradford, Cameron, Centre, Clearfield, Clinton, Columbia, Juniata, Lycoming, Montour, Northumberland, Potter, Snyder, Sullivan, Tioga, Union.

BASINS – The PADEP basin (numbers range from 1-35) the well is located in. For NCRO, wells are located in Basins 1, 2, 3, 4, 5, 6, 8, 26, 33, 34.

GEO1 – General geologic (bedrock) unit. For NCRO, the bedrock units are bcoal (bituminous coal), pocarb (Precambrian through Ordovician carbonates), qscong (quartzite, sandstone, and conglomerate), redsed (red sedimentary rocks), sdcarb (Silurian and Devonian carbonates), shale (shale), ice (glacial sediments).

GEOLITH – Generated numeric code that relates to GEO1. bcoal = 2, pocarb = 5, qscong = 6, redsed = 7, sdcarb = 9, shale = 10, ice = 13.
