

# UNIVERSITY OF NEW ORLEANS

DEPARTMENT OF GEOLOGY AND GEOPHYSICS

## VIBRACORE DESCRIPTION SHEET

CORE ID: BSS 00-178

DATE: 8-14-00

DESCRIBED BY: myke b.

ELEVATION: -7.80m (-25.4')

LOCATION: 2 Km south of Bayou Cheneiere Ronquille

CORE LENGTH: 5.18 m (16.99)

LAT/LONG: 29° 16.649 89° 48.536

TOTAL DEPTH: 5.32m (17.44') COMPACTION: 0.14m (0.45')

### PHYSICAL DESCRIPTION

0-254cm (CL)  
Horizontal laminations of clay with an occasional lens of sand. There is deformation from 150-180cm due to vibro coring. Bed thickness ranges from 0.2-2.0 cm on avg. Shells are absent and there is a coffee ground lag deposit at 200-203 cm.

254- 413cm (ML)  
Inter bedded sands, silts and clays with an occasional thin lens of coffee grounds. Deformation is present throughout entire sub unit. Bed thickness ranges from 0.5-2.0cm. In situ roots are located from 316-324

413- 518cm (SC)  
Small scale inter bedded sands silts and clays. As above a layer of coffee grounds will occasionally substitute. Some deformation due to de-watering is present at the top of subunit. Bed thickness ranges from 0.1-0.5cm. Bio turbation is absent.

0- 8.33' (CL)

8.33' - 13.54' (ML)

13.54' - 16.99' (SC)
