

Table 2. Chemical analyses (including precision and accuracy) of water samples collected from lysimeters at the Manning Canyon repository, Mercur Mining District, Utah.

[All samples analyzed by method ICP-MS, inductively coupled plasma mass spectrometry, except as indicated for sodium (Na); µg/L, micrograms per liter; mg/L, milligrams per liter; AES, sodium analyzed by method ICP-AES, inductively coupled plasma-atomic-emission spectrometry, Na values from ICP-AES samples diluted and run; MS, sodium analyzed by method ICP-MS, inductively coupled plasma mass spectrometry; <, less than; D.I., deionized water added to lysimeter; nr, sodium values not reported because out of ICP-MS method range; asterisk (at Field Sample number P1L3Z05) indicates uncertainty of depth of lysimeter sampling zone due to tubing problems at and near that location]
