

Figure 10A. Arsenic in dry weight from largemouth bass (LMB; *Micropterus salmoides*), blue catfish (CAT; *Ictalurus furcatus*), and striped mullet (MUL; *Mugil cephalus*) collected from Davis Pond postdiversion sites from December 2007 through February 2009. The lower detection limit was 0.1 parts per million. The horizontal line represents the 85th percentile in dry weight from the National Contaminant Biomonitoring Program (Schmitt and Brumbaugh, 1990); for arsenic it is 0.93 micrograms per gram ($\mu\text{g/g}$).
