Work continued from Page

Today I began compiling field information for this project and started logging samples into the USGS NWIS database. I have compiled much of the field data into an EXCEL spreadsheet for data entry and to record record numbers assigned to each sample record by the database. Excel file is called "Sample Login worksheet" and is located on the Wyoming WSC projects directory under Pavillion\Data\

While compiling sampling information for the database I also filled in a groundwater quality Note for each of the two environmental samples we collected. Quality Control info is included in this notebook and on each applicable ground water quality note.

Some sections of the ground water quality note have been removed since they were not used as part of sampling, such as the "Well and Water-Level Information" and "Alkalinity/ANC calculations" sections.

Additionally, since the well MW01 was continuously purged between groundwater quality samples much of the data included in the form for the sample collected with a time of 1330 is the same for the sample collected with a time of 1830. For this reason only selected pages of the ground water quality note are included for the 1830 sample with several references to the 1330 sample Note.
