

Currents at LT-A Sorted by Speed and Direction Low-Pass Filtered ADCP Observations at ~15 m, 1995

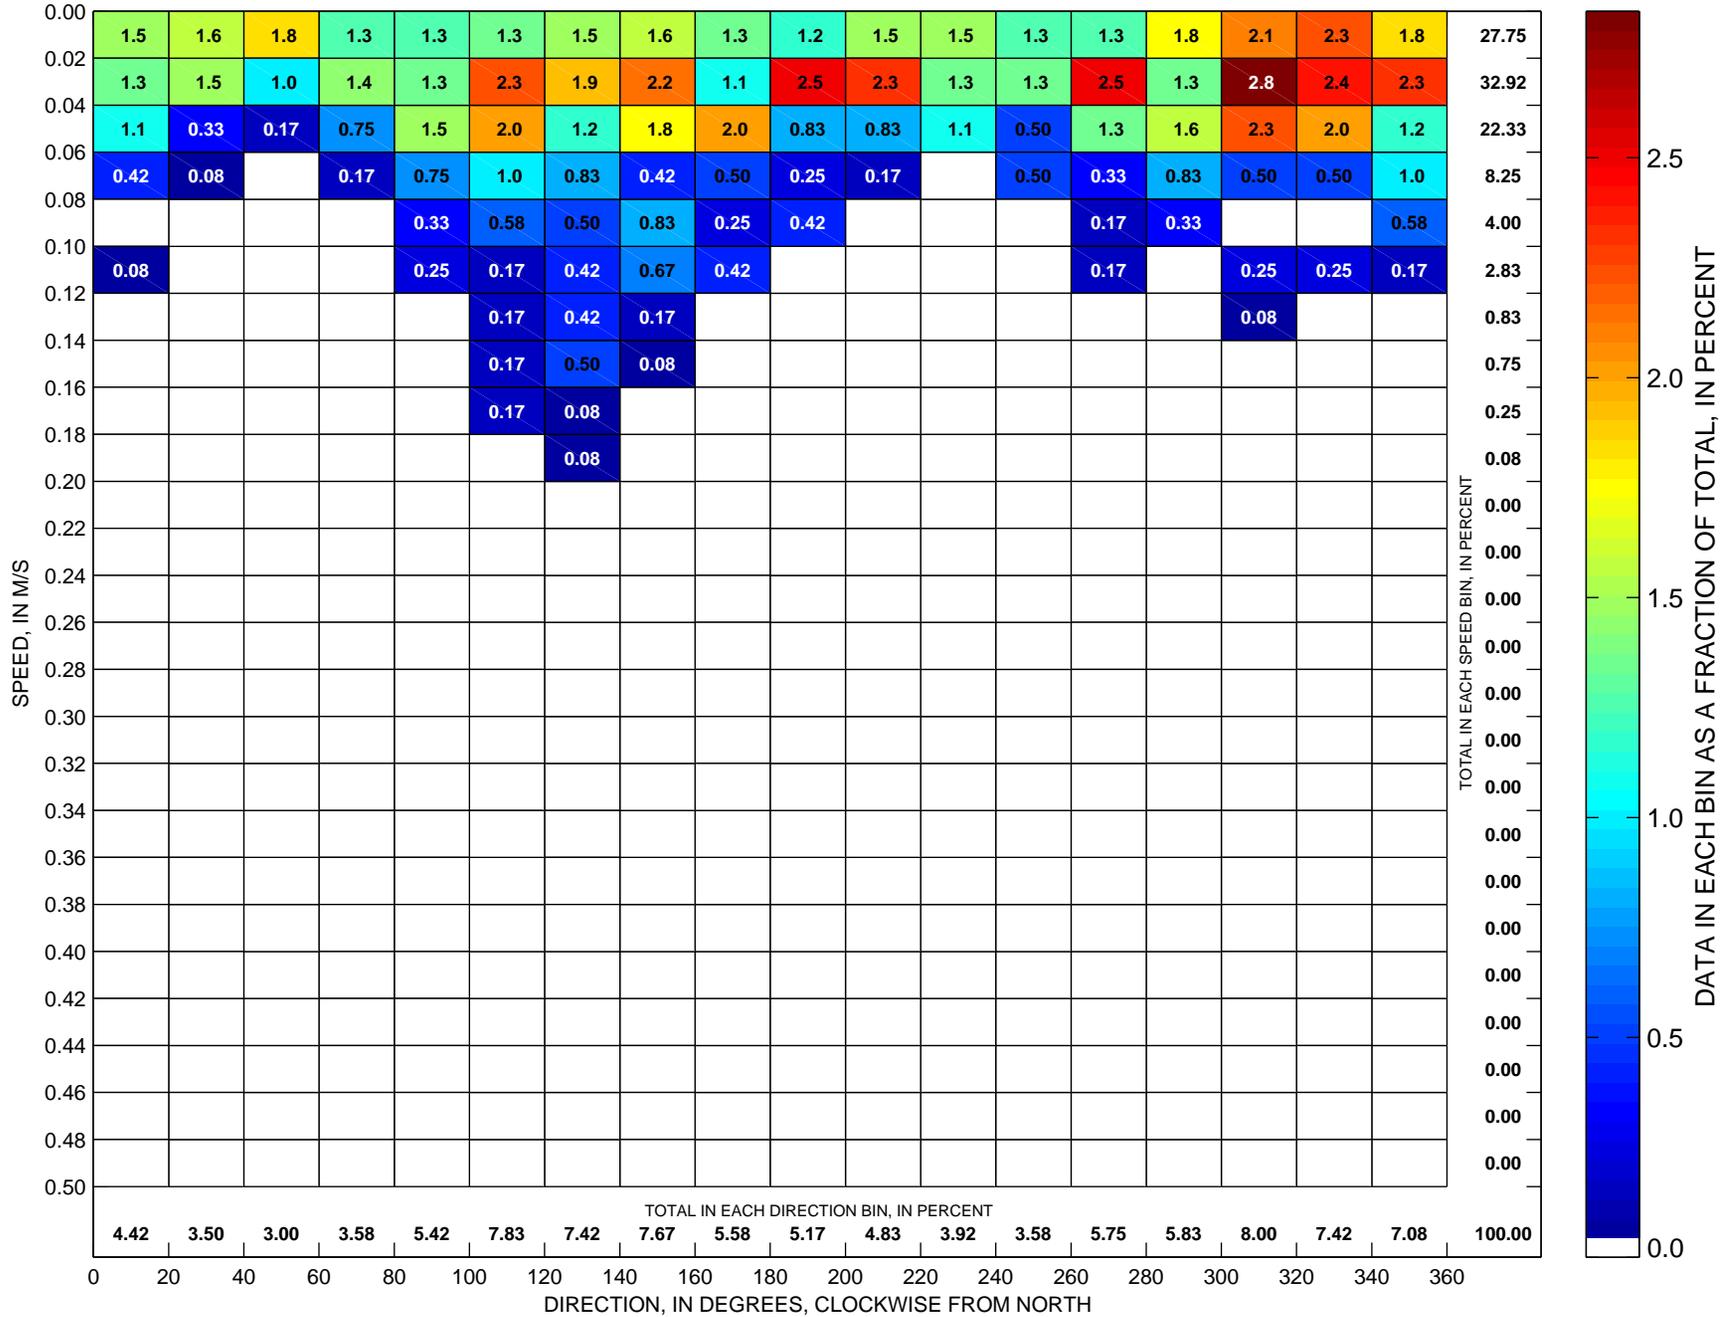

Total number of data points sorted is 236, which is 16 percent of possible observations made during the full year.

Currents at LT-A Sorted by Speed and Direction Low-Pass Filtered ADCP Observations at ~15 m, 1996

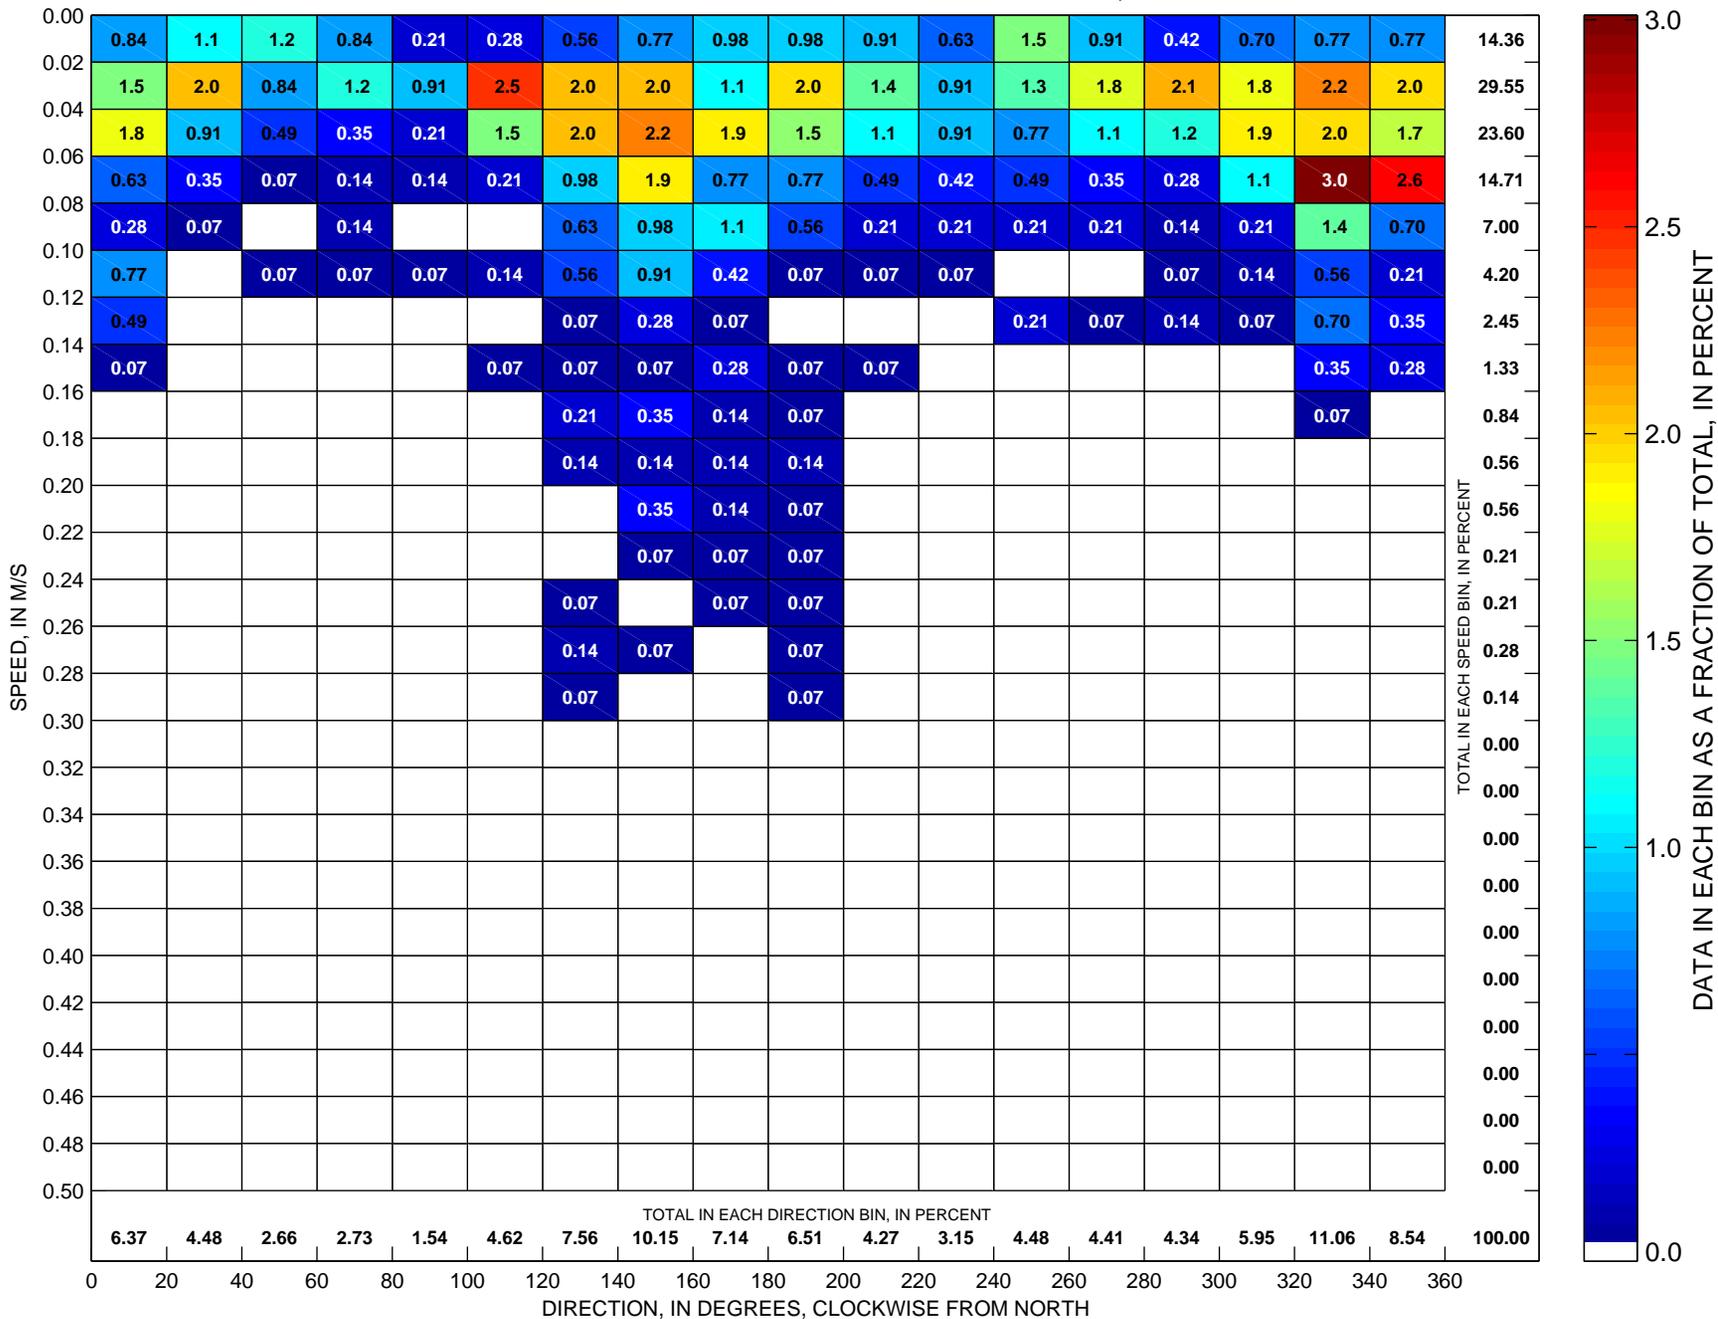

Total number of data points sorted is 207, which is 14 percent of possible observations made during the full year.

Currents at LT-A Sorted by Speed and Direction Low-Pass Filtered ADCP Observations at ~15 m, 1997

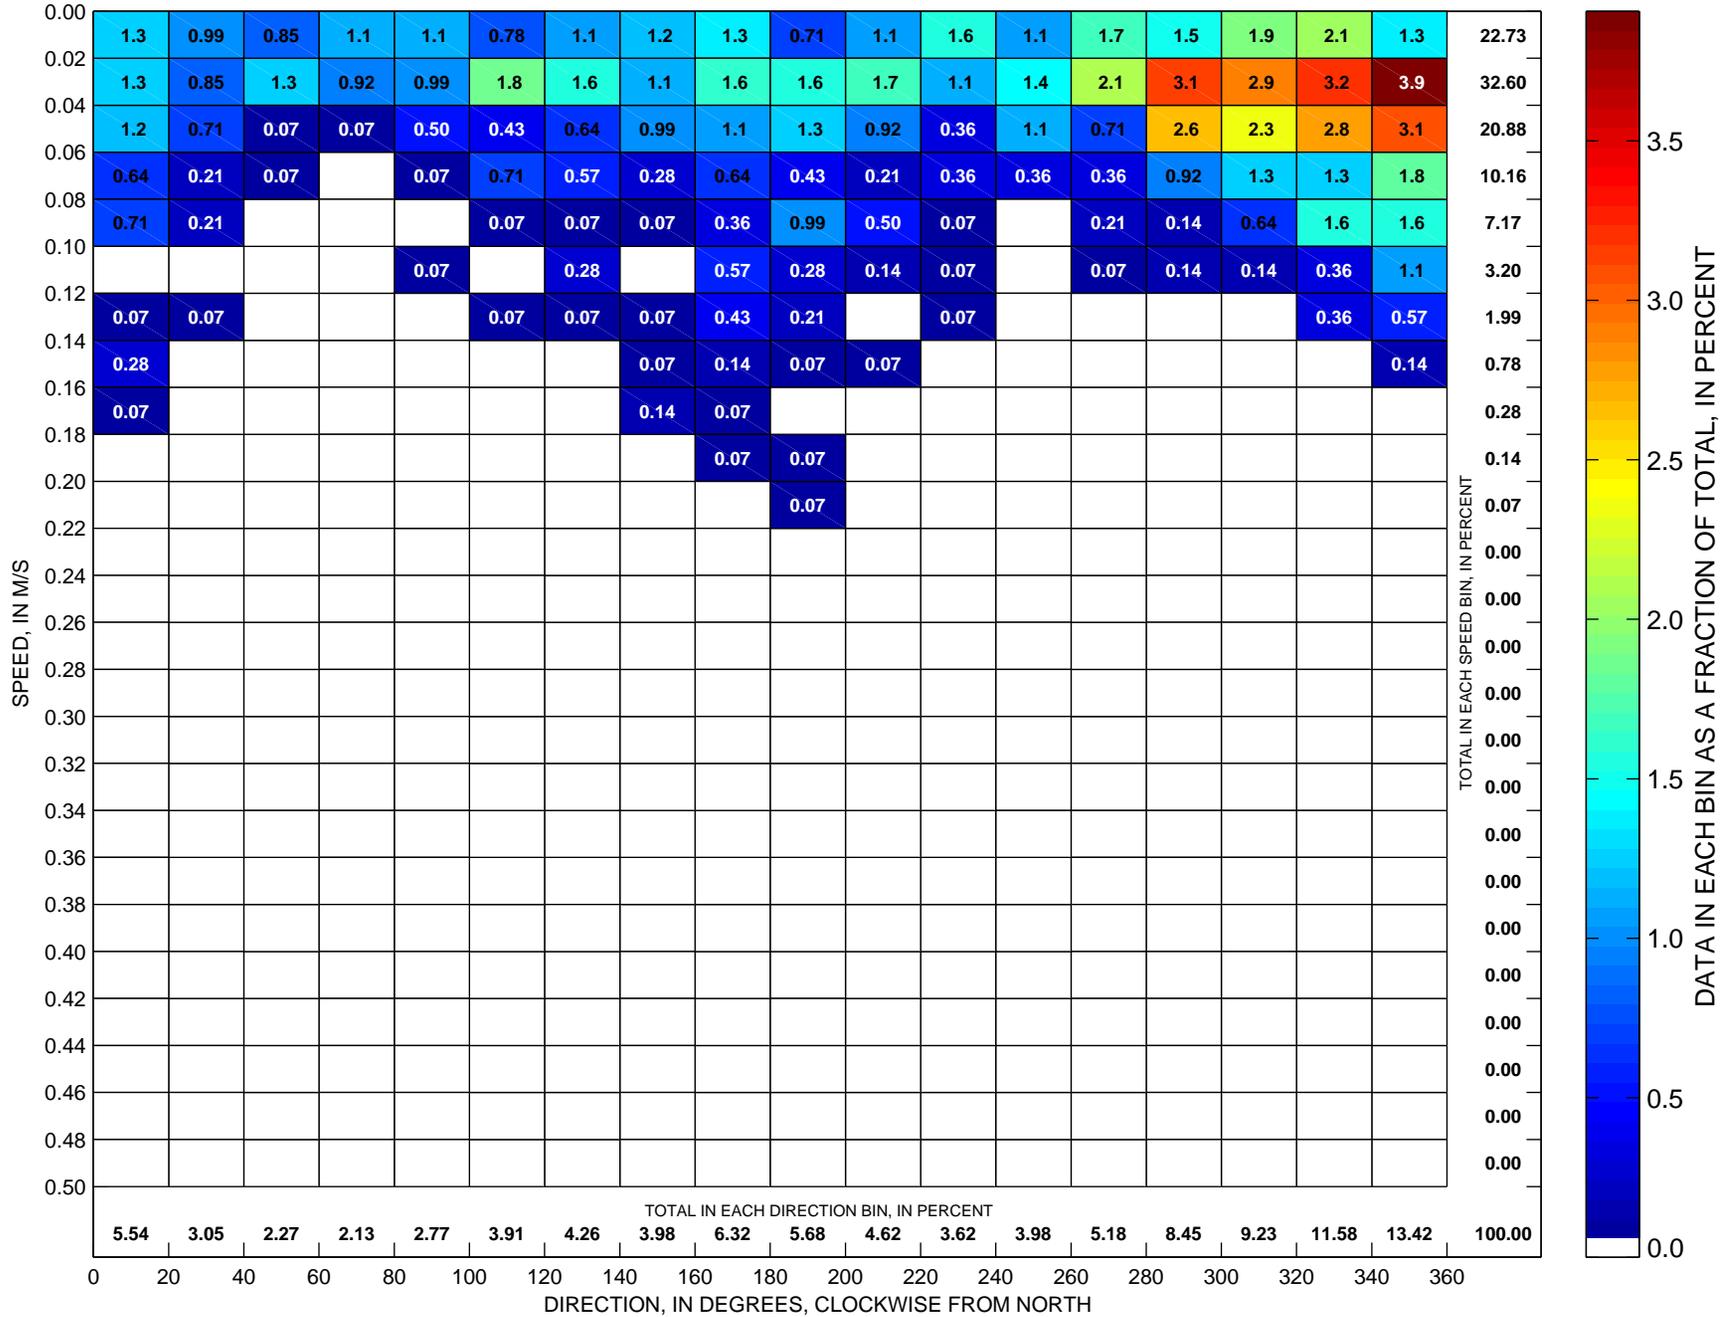

Total number of data points sorted is 1200, which is 82 percent of possible observations made during the full year.

Currents at LT-A Sorted by Speed and Direction Low-Pass Filtered ADCP Observations at ~15 m, 1998

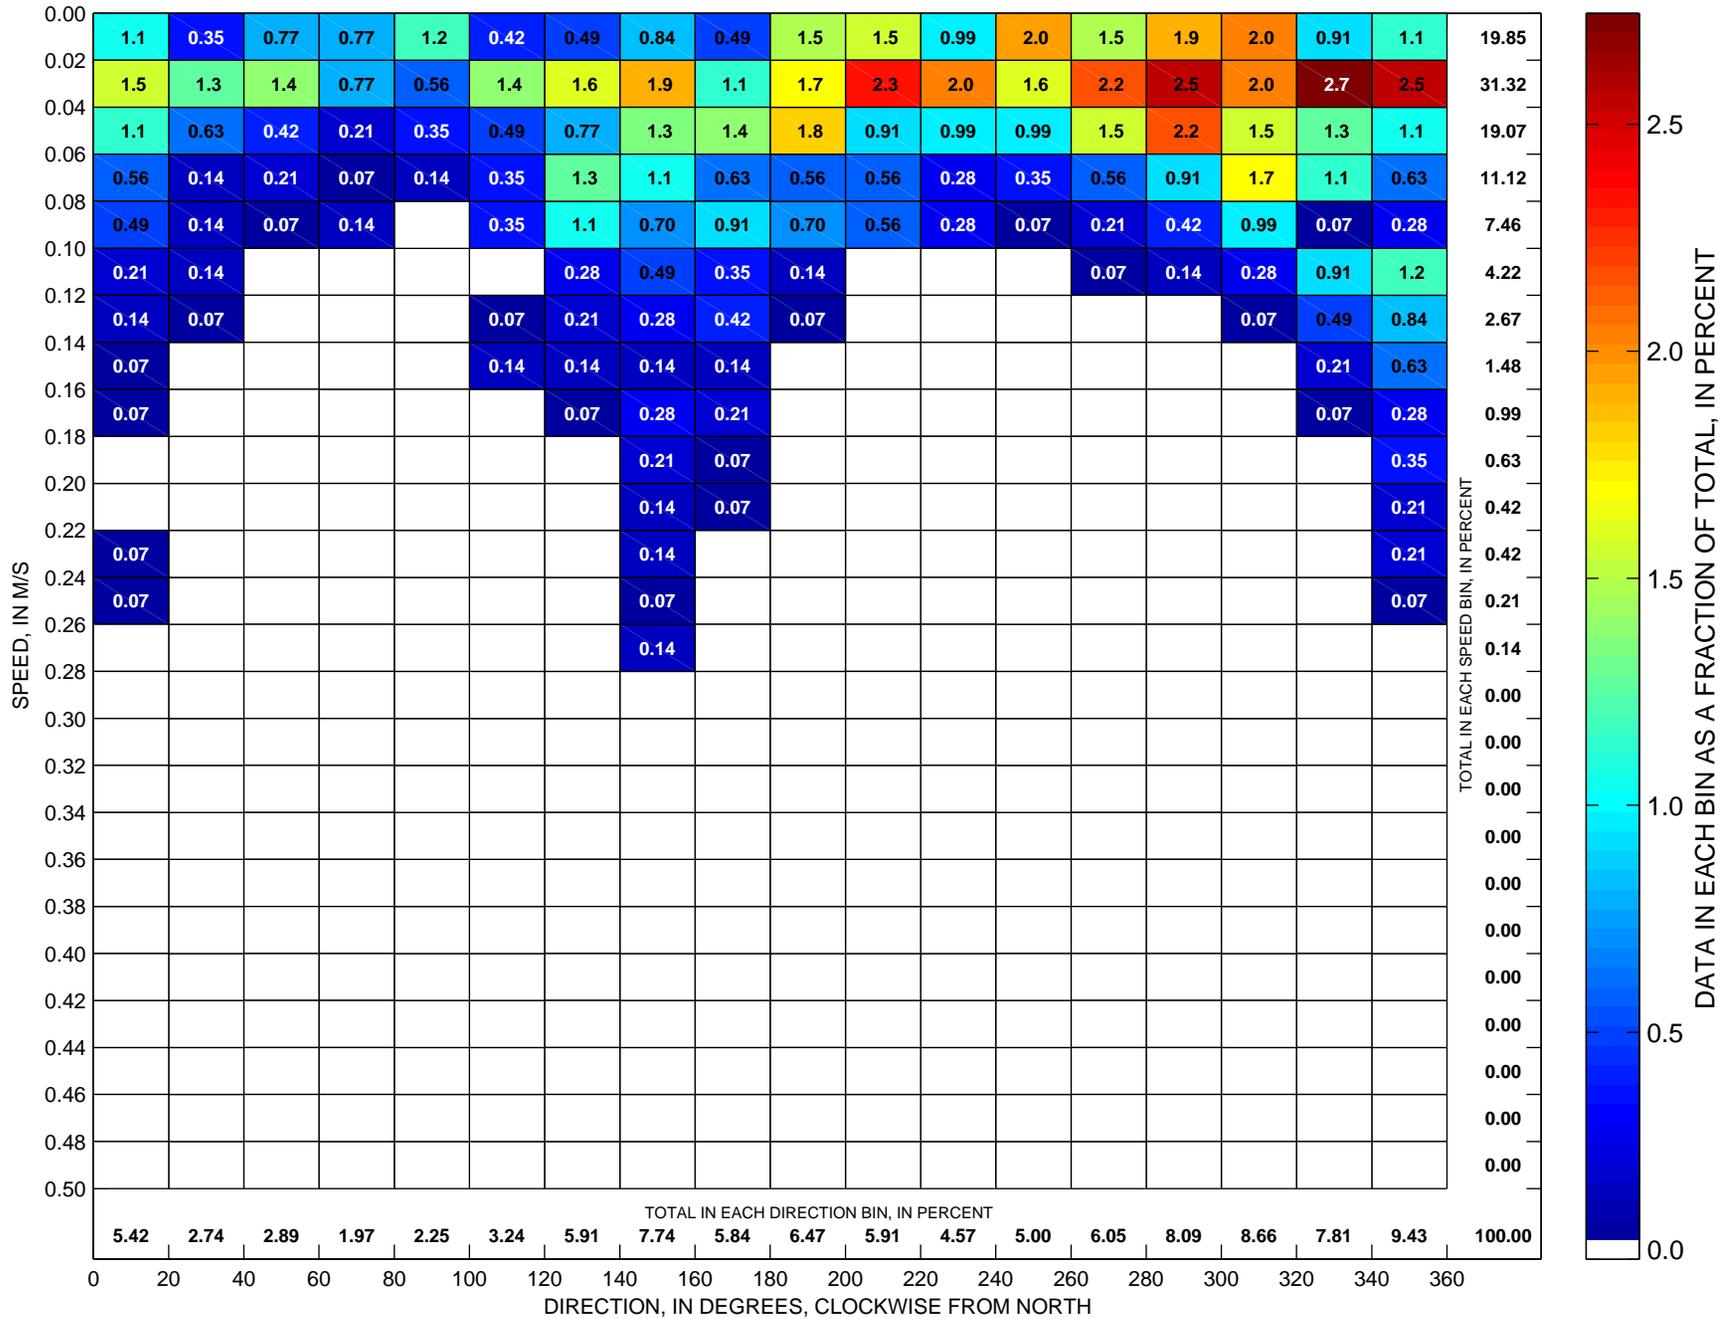

Total number of data points sorted is 1428, which is 98 percent of possible observations made during the full year.

Currents at LT-A Sorted by Speed and Direction Low-Pass Filtered ADCP Observations at ~15 m, 1999

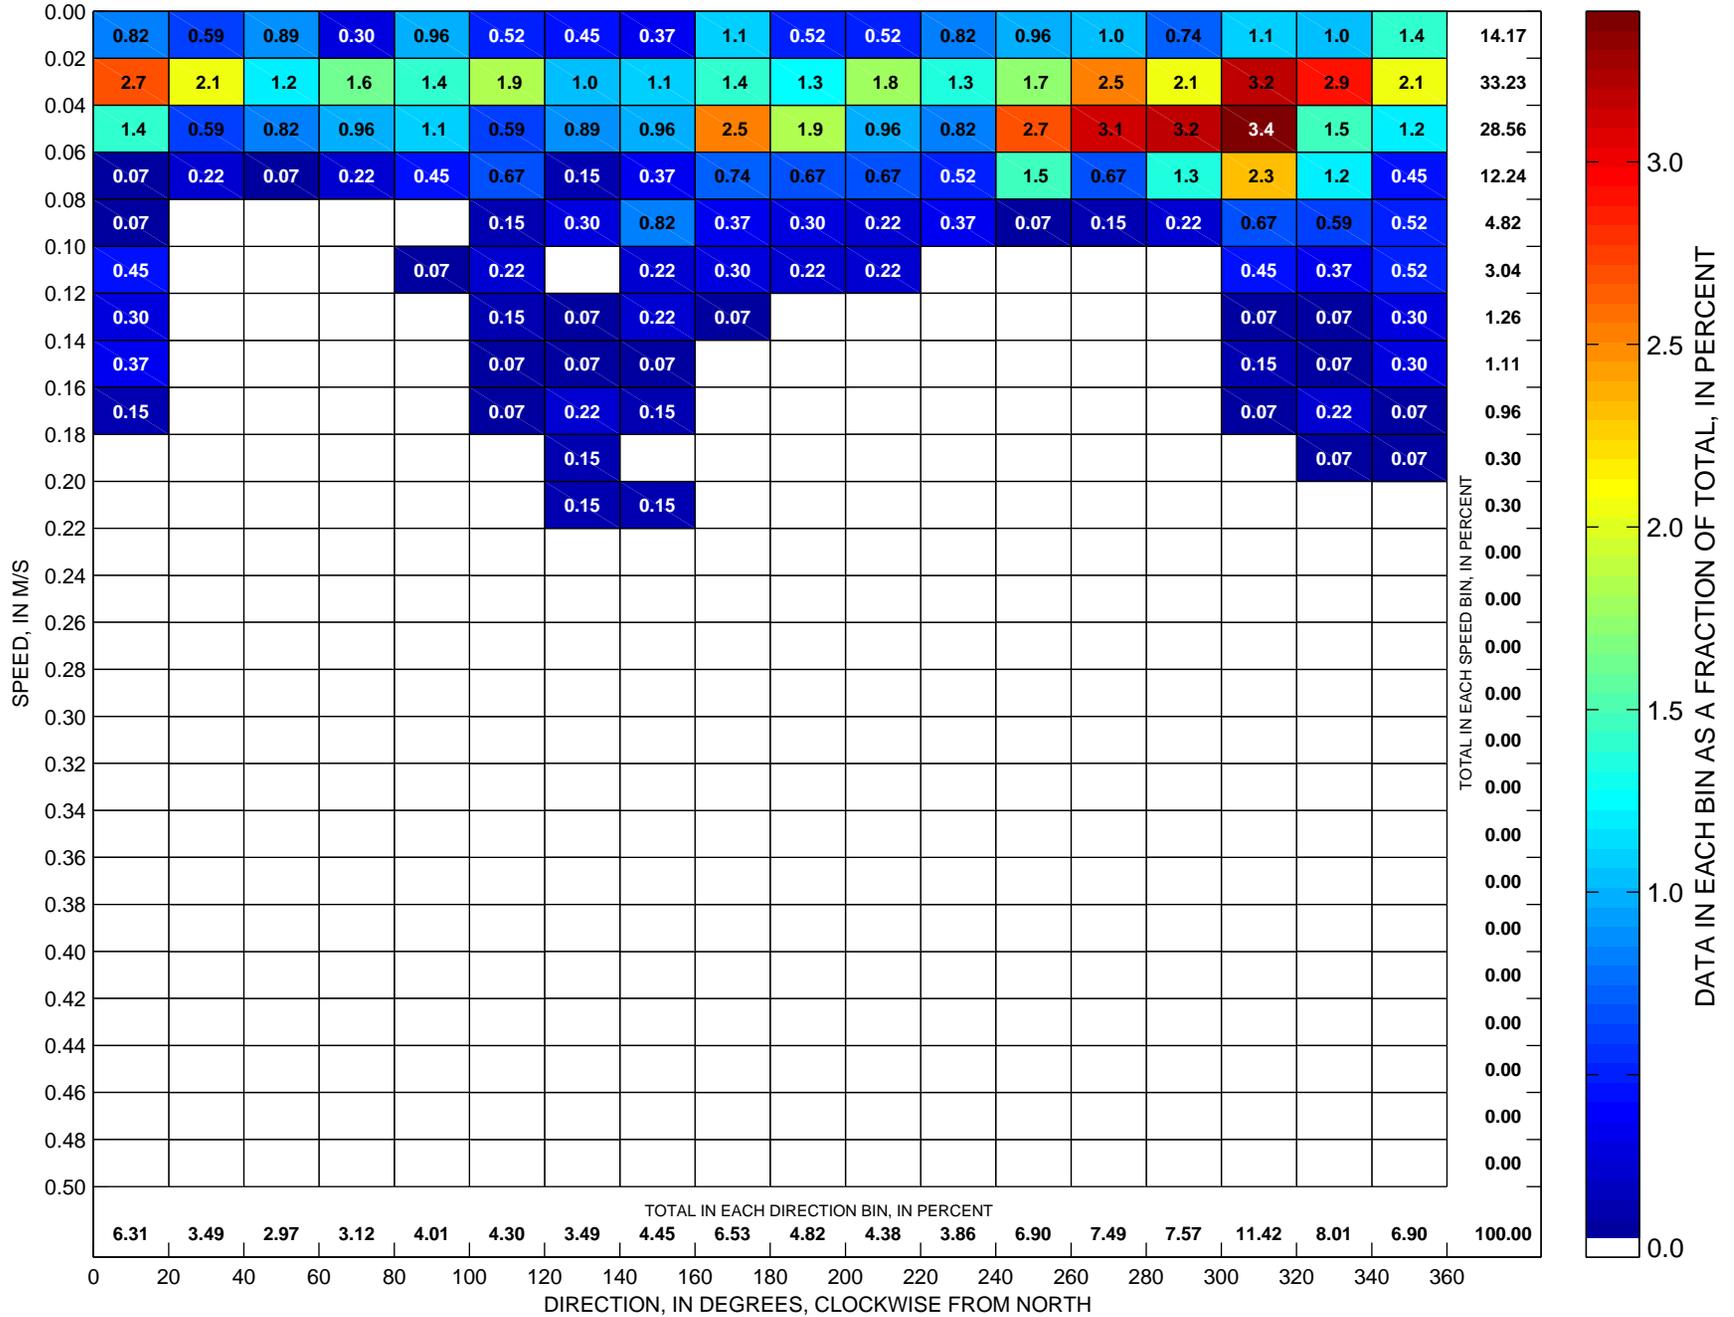

Total number of data points sorted is 1408, which is 96 percent of possible observations made during the full year.

Currents at LT-A Sorted by Speed and Direction Low-Pass Filtered ADCP Observations at ~15 m, 2000

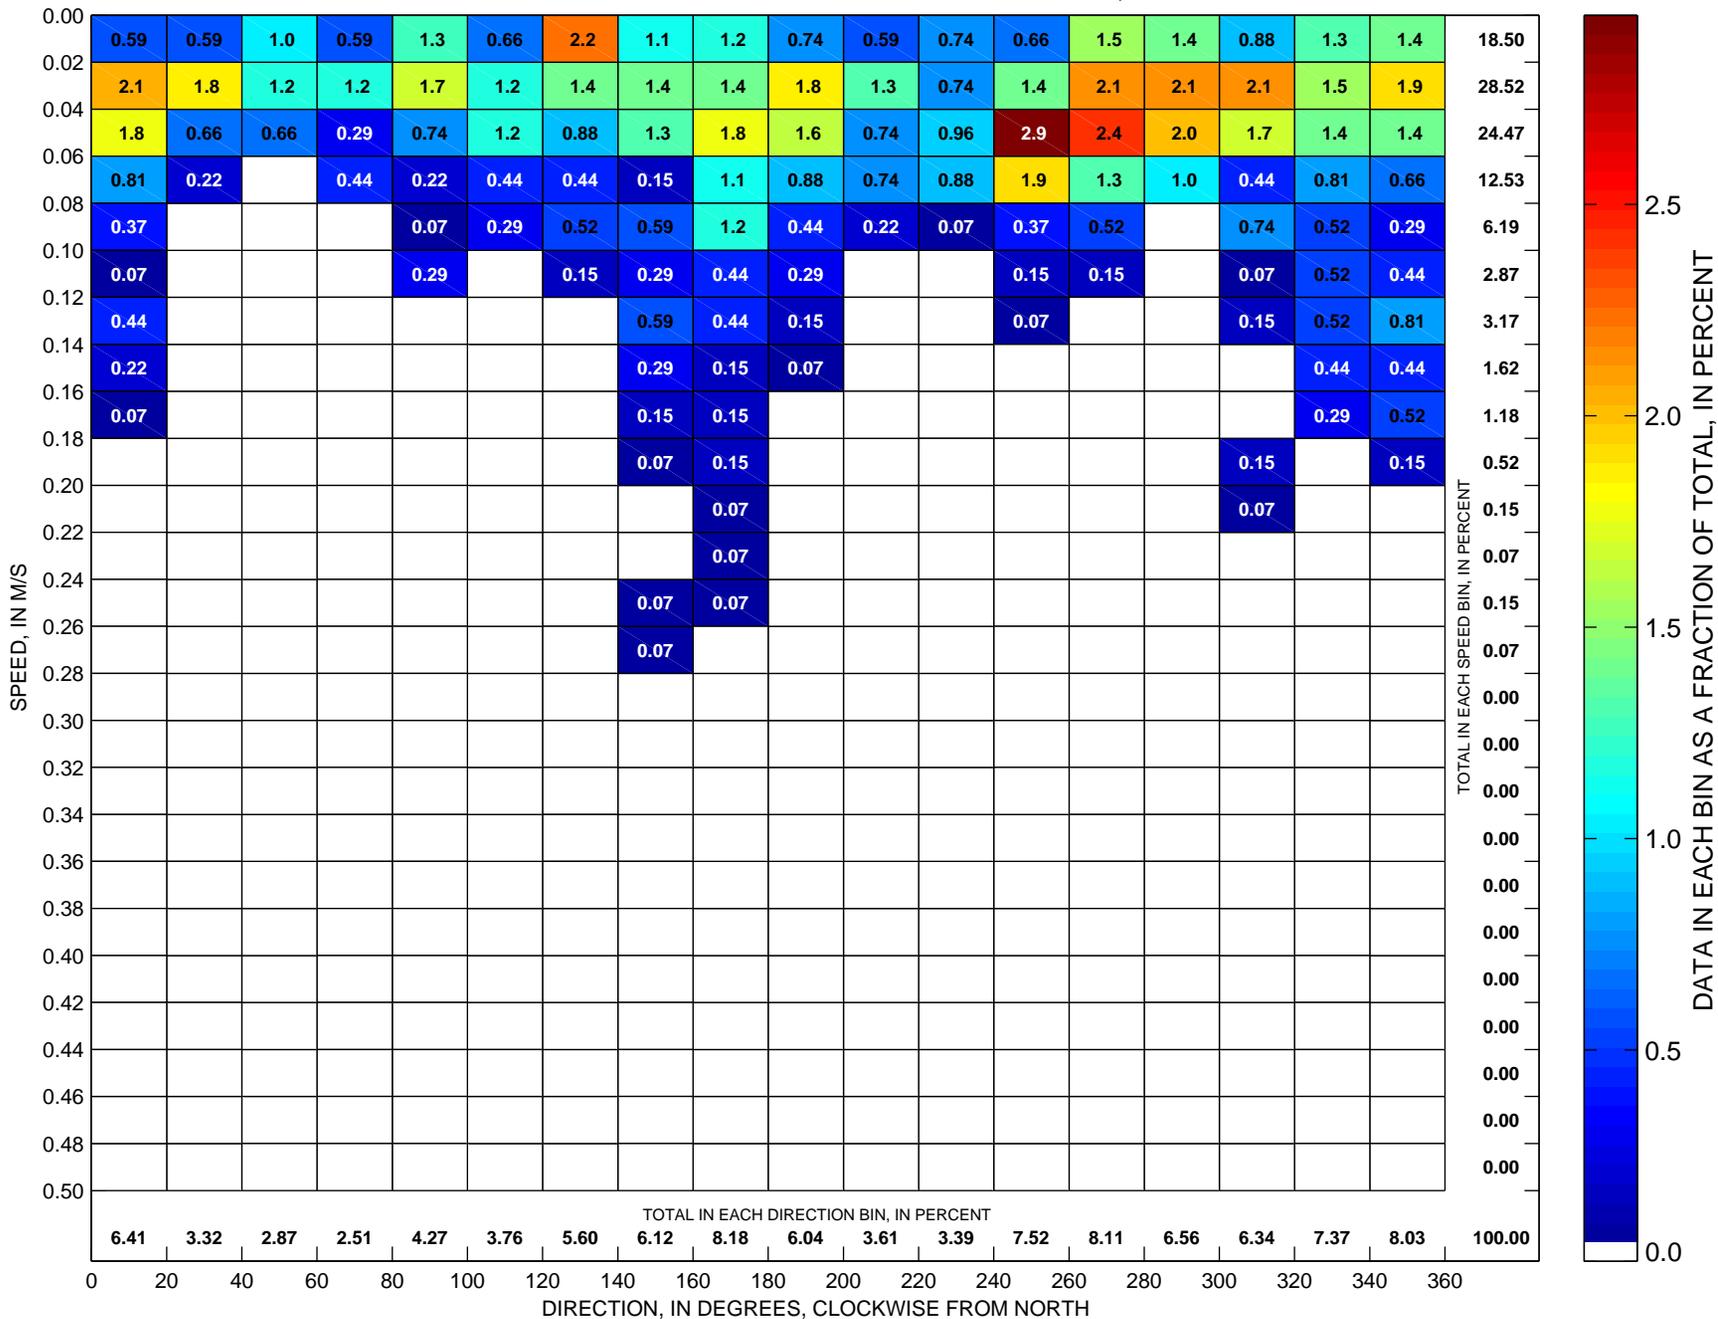

Total number of data points sorted is 1421, which is 97 percent of possible observations made during the full year.

Currents at LT-A Sorted by Speed and Direction Low-Pass Filtered ADCP Observations at ~15 m, 2001

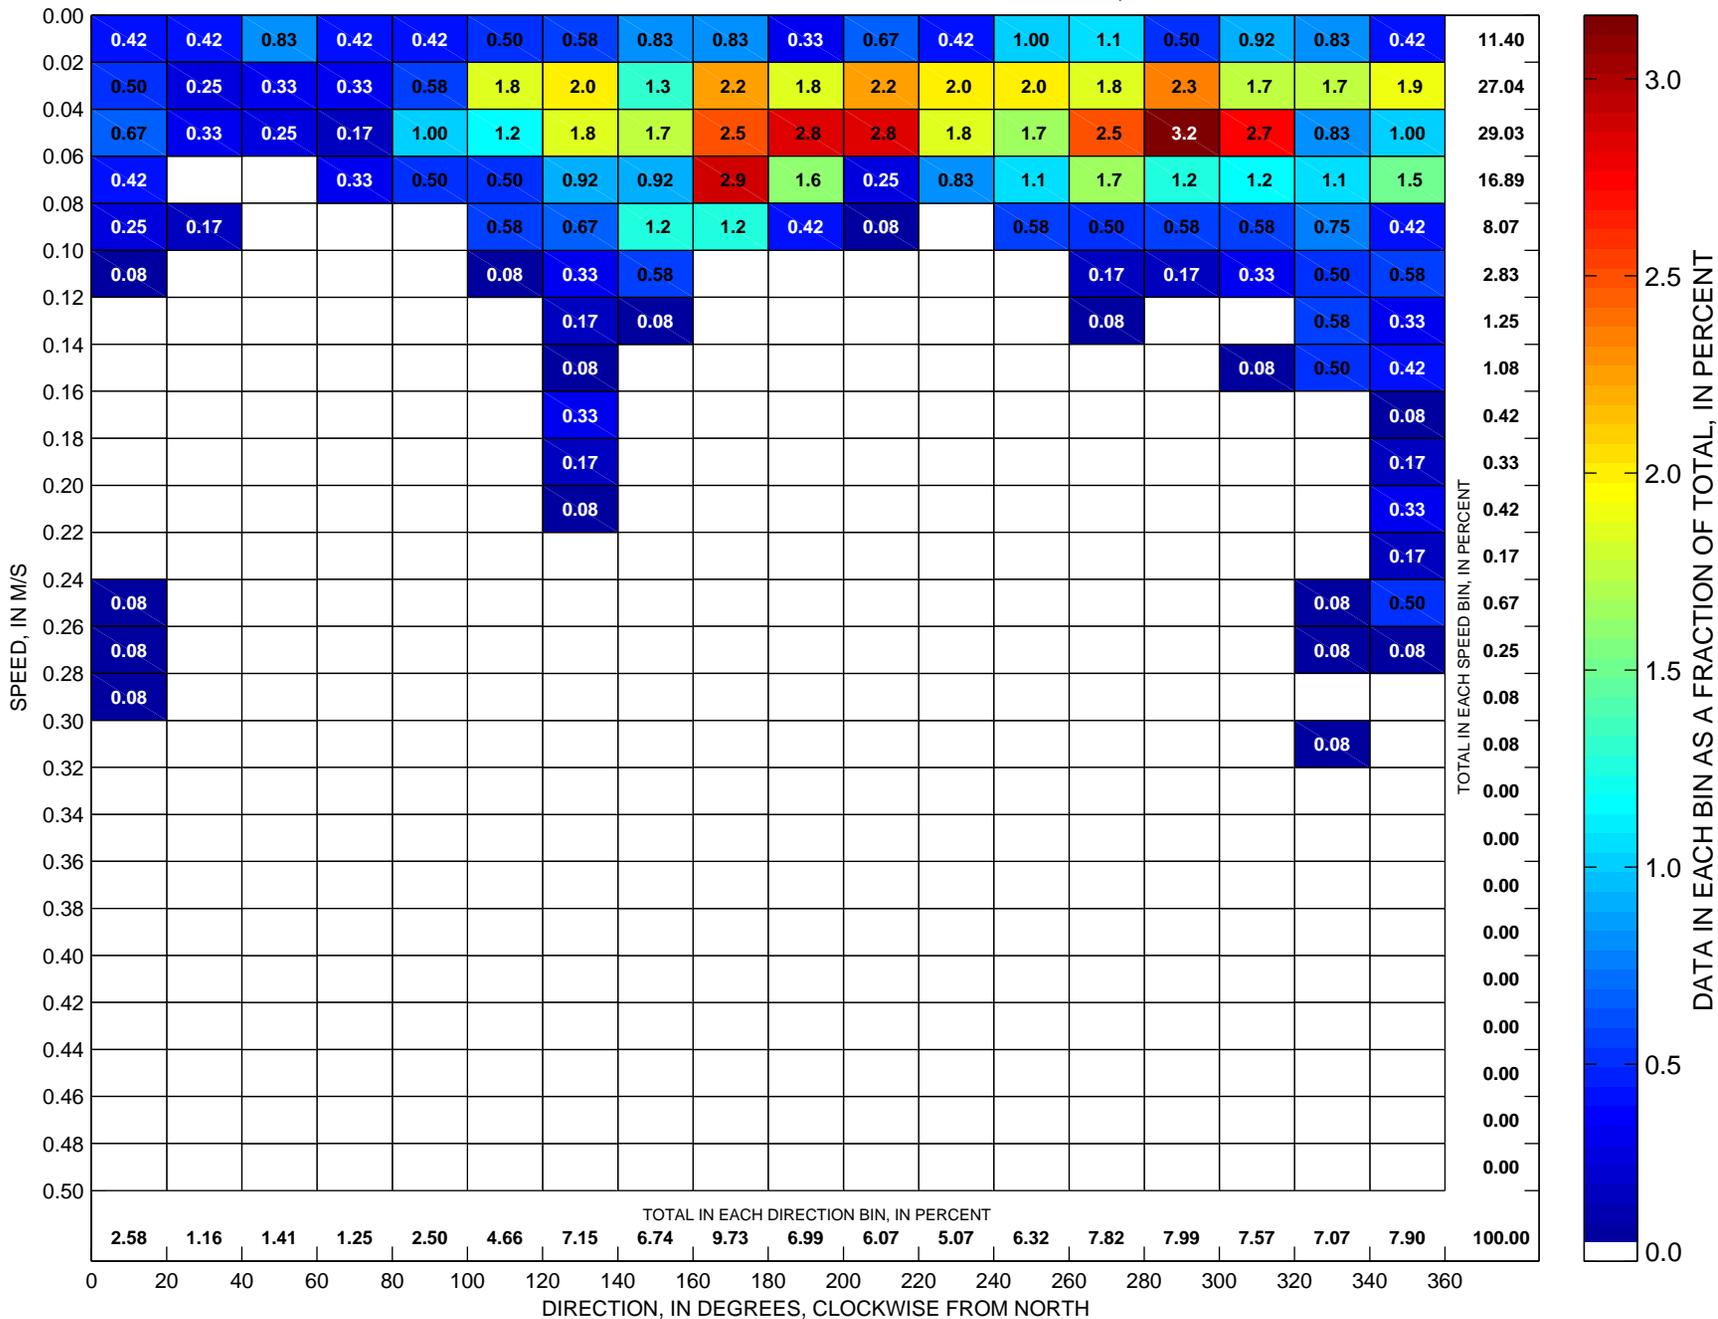

Total number of data points sorted is 1348, which is 92 percent of possible observations made during the full year.

Currents at LT-A Sorted by Speed and Direction Low-Pass Filtered ADCP Observations at ~15 m, 2002

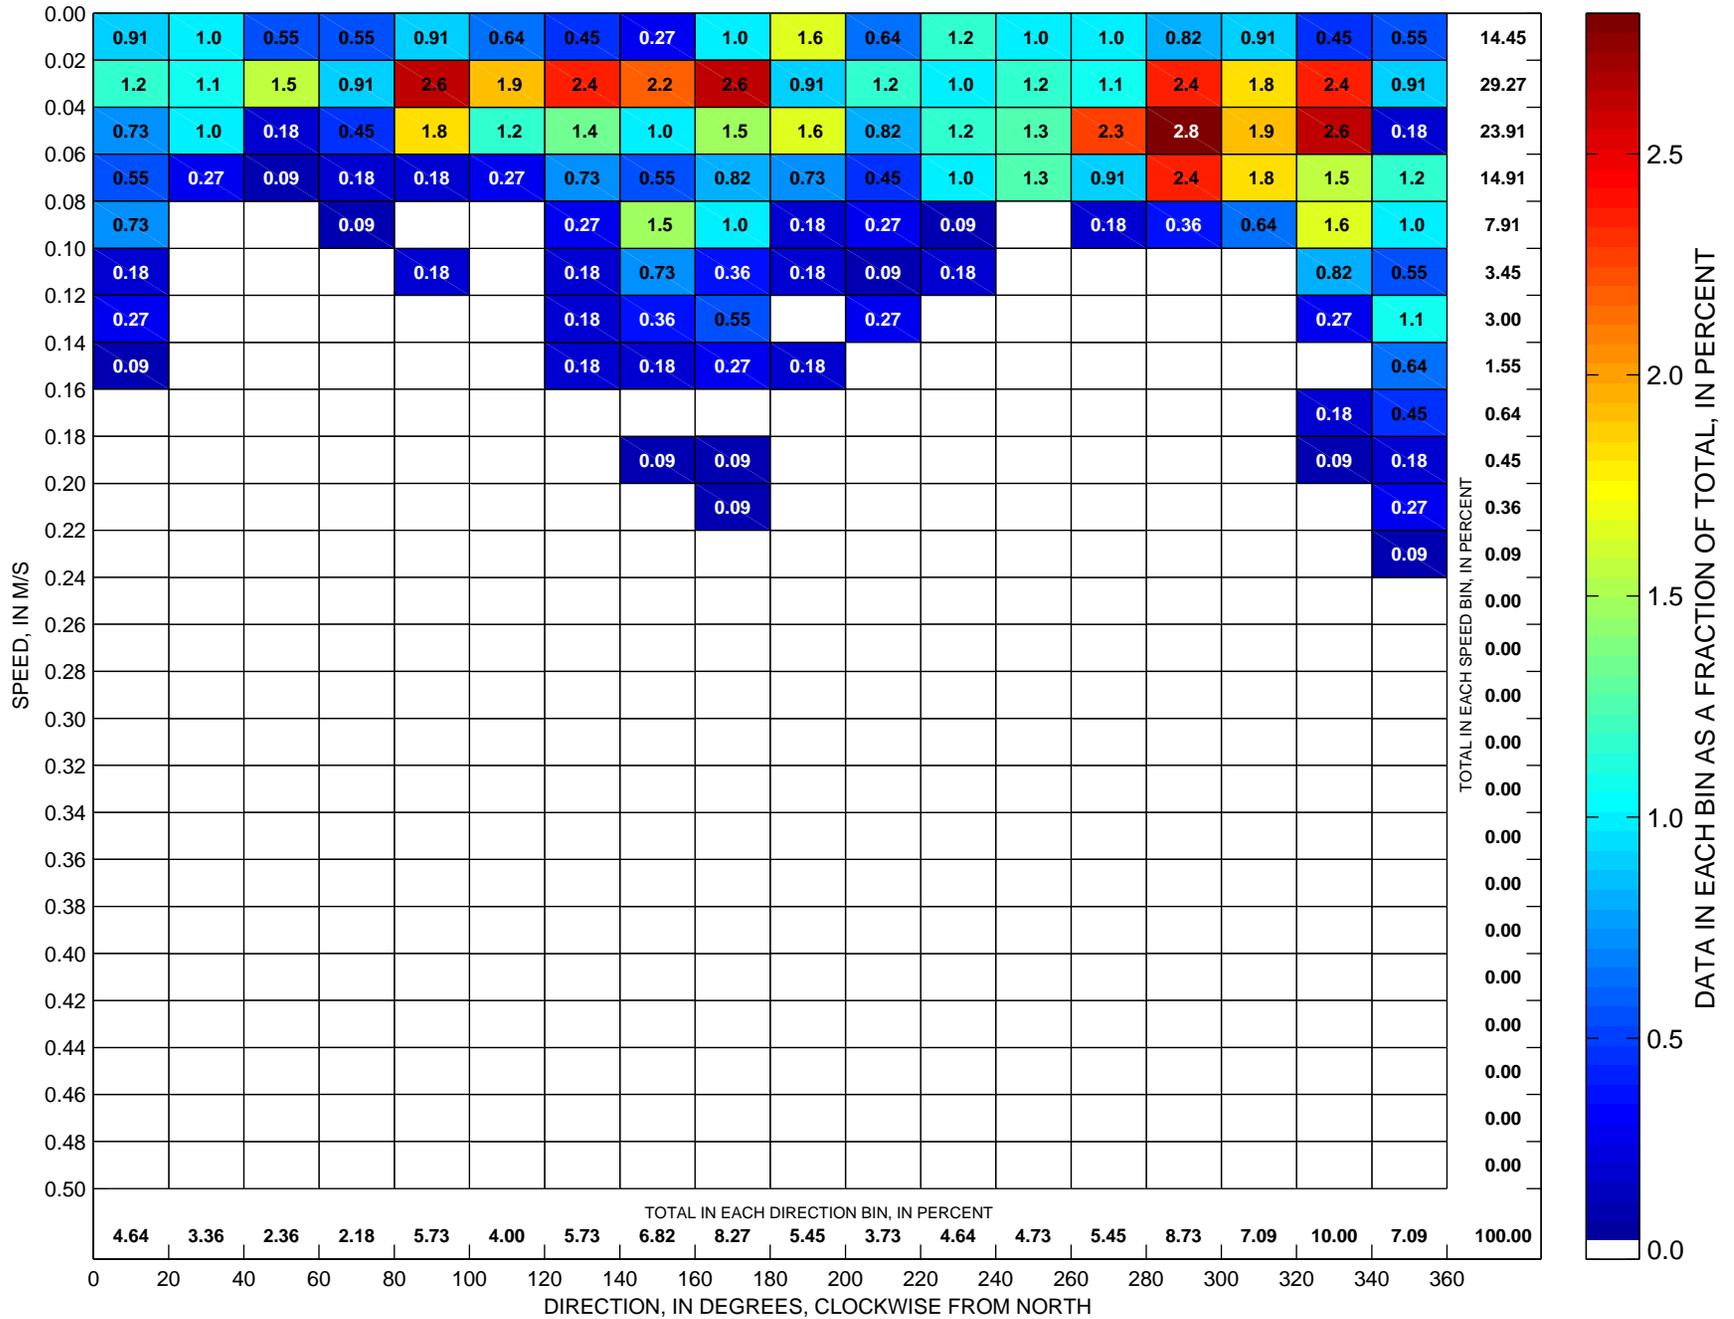

Total number of data points sorted is 1357, which is 93 percent of possible observations made during the full year.

Currents at LT-A Sorted by Speed and Direction Low-Pass Filtered ADCP Observations at ~15 m, 2003

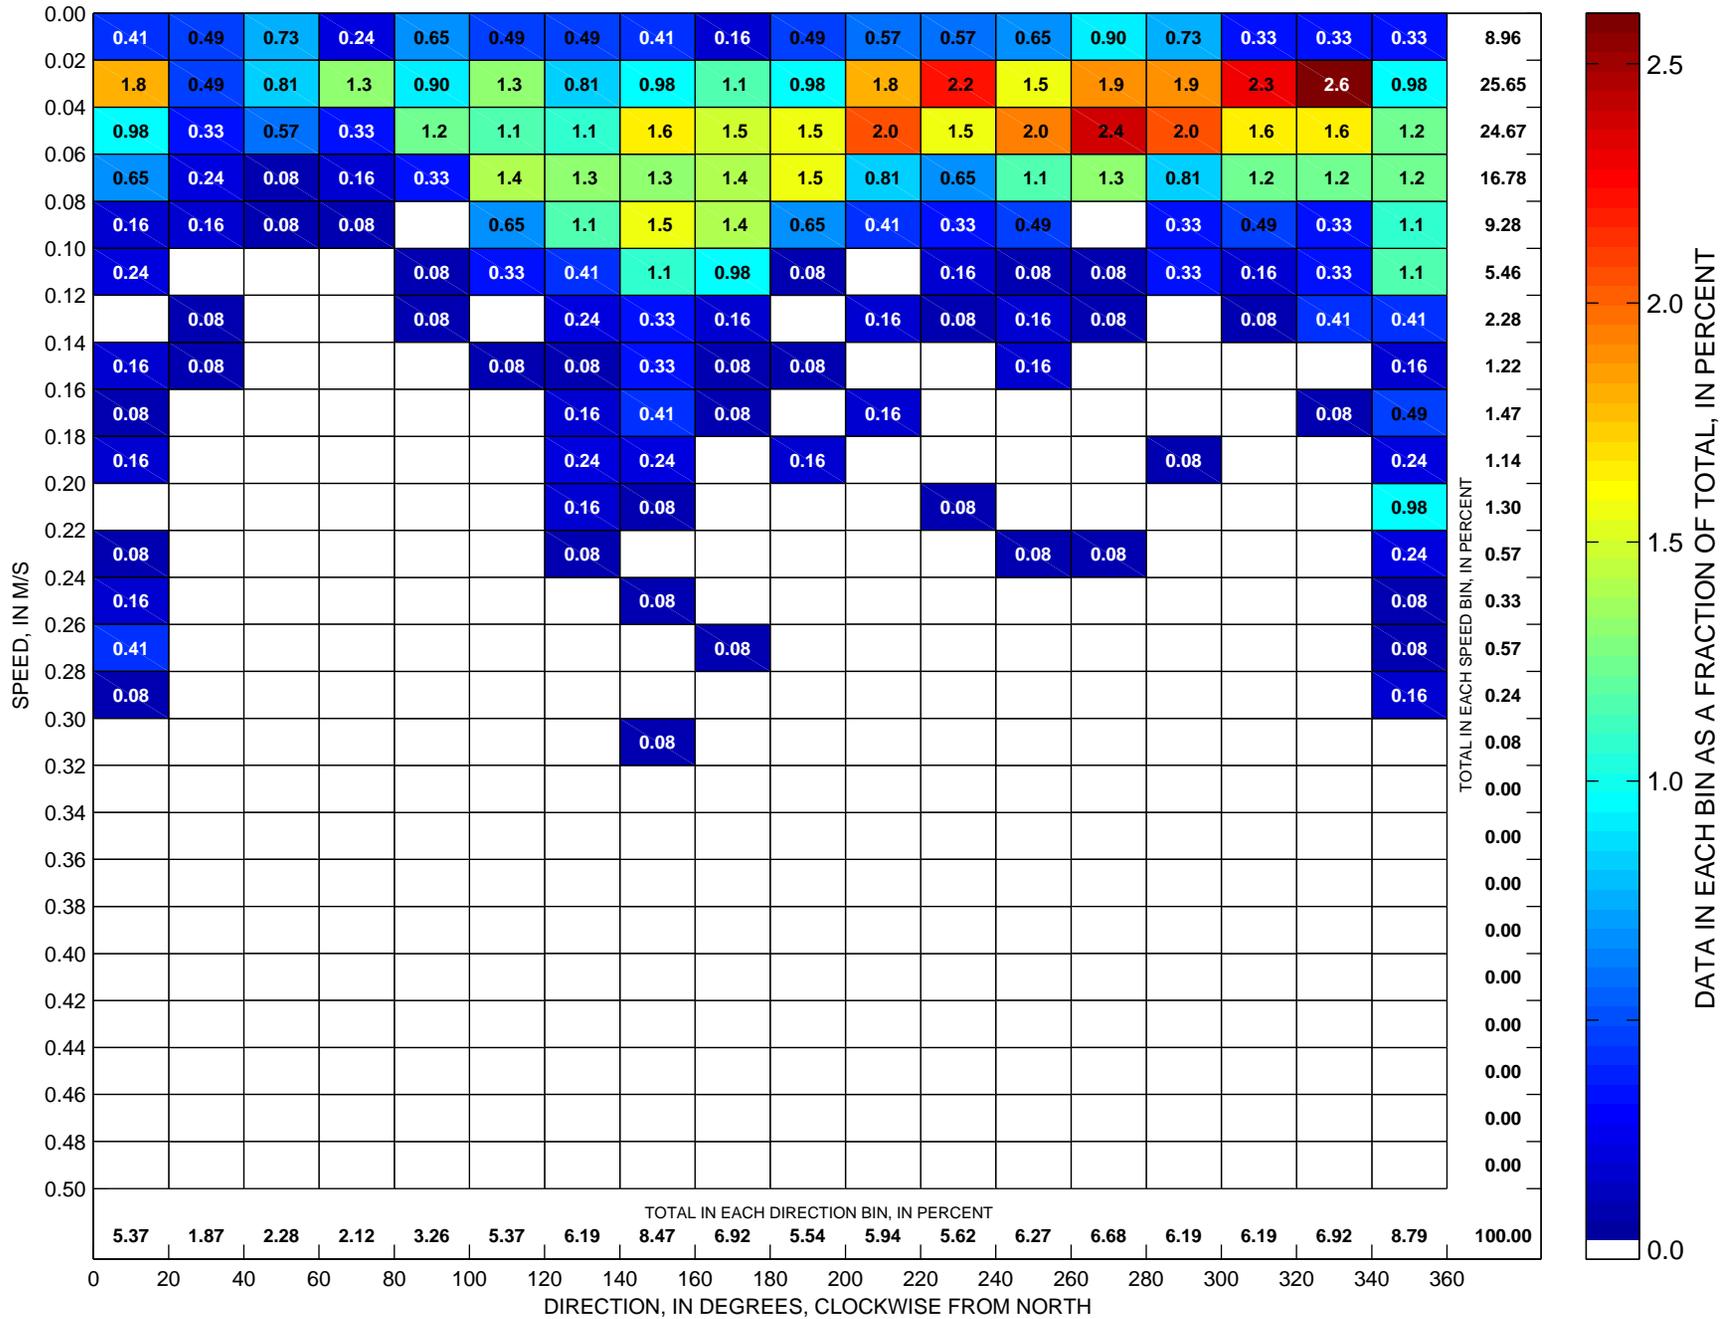

Total number of data points sorted is 1202, which is 82 percent of possible observations made during the full year.

Currents at LT-A Sorted by Speed and Direction Low-Pass Filtered ADCP Observations at ~15 m, 2004

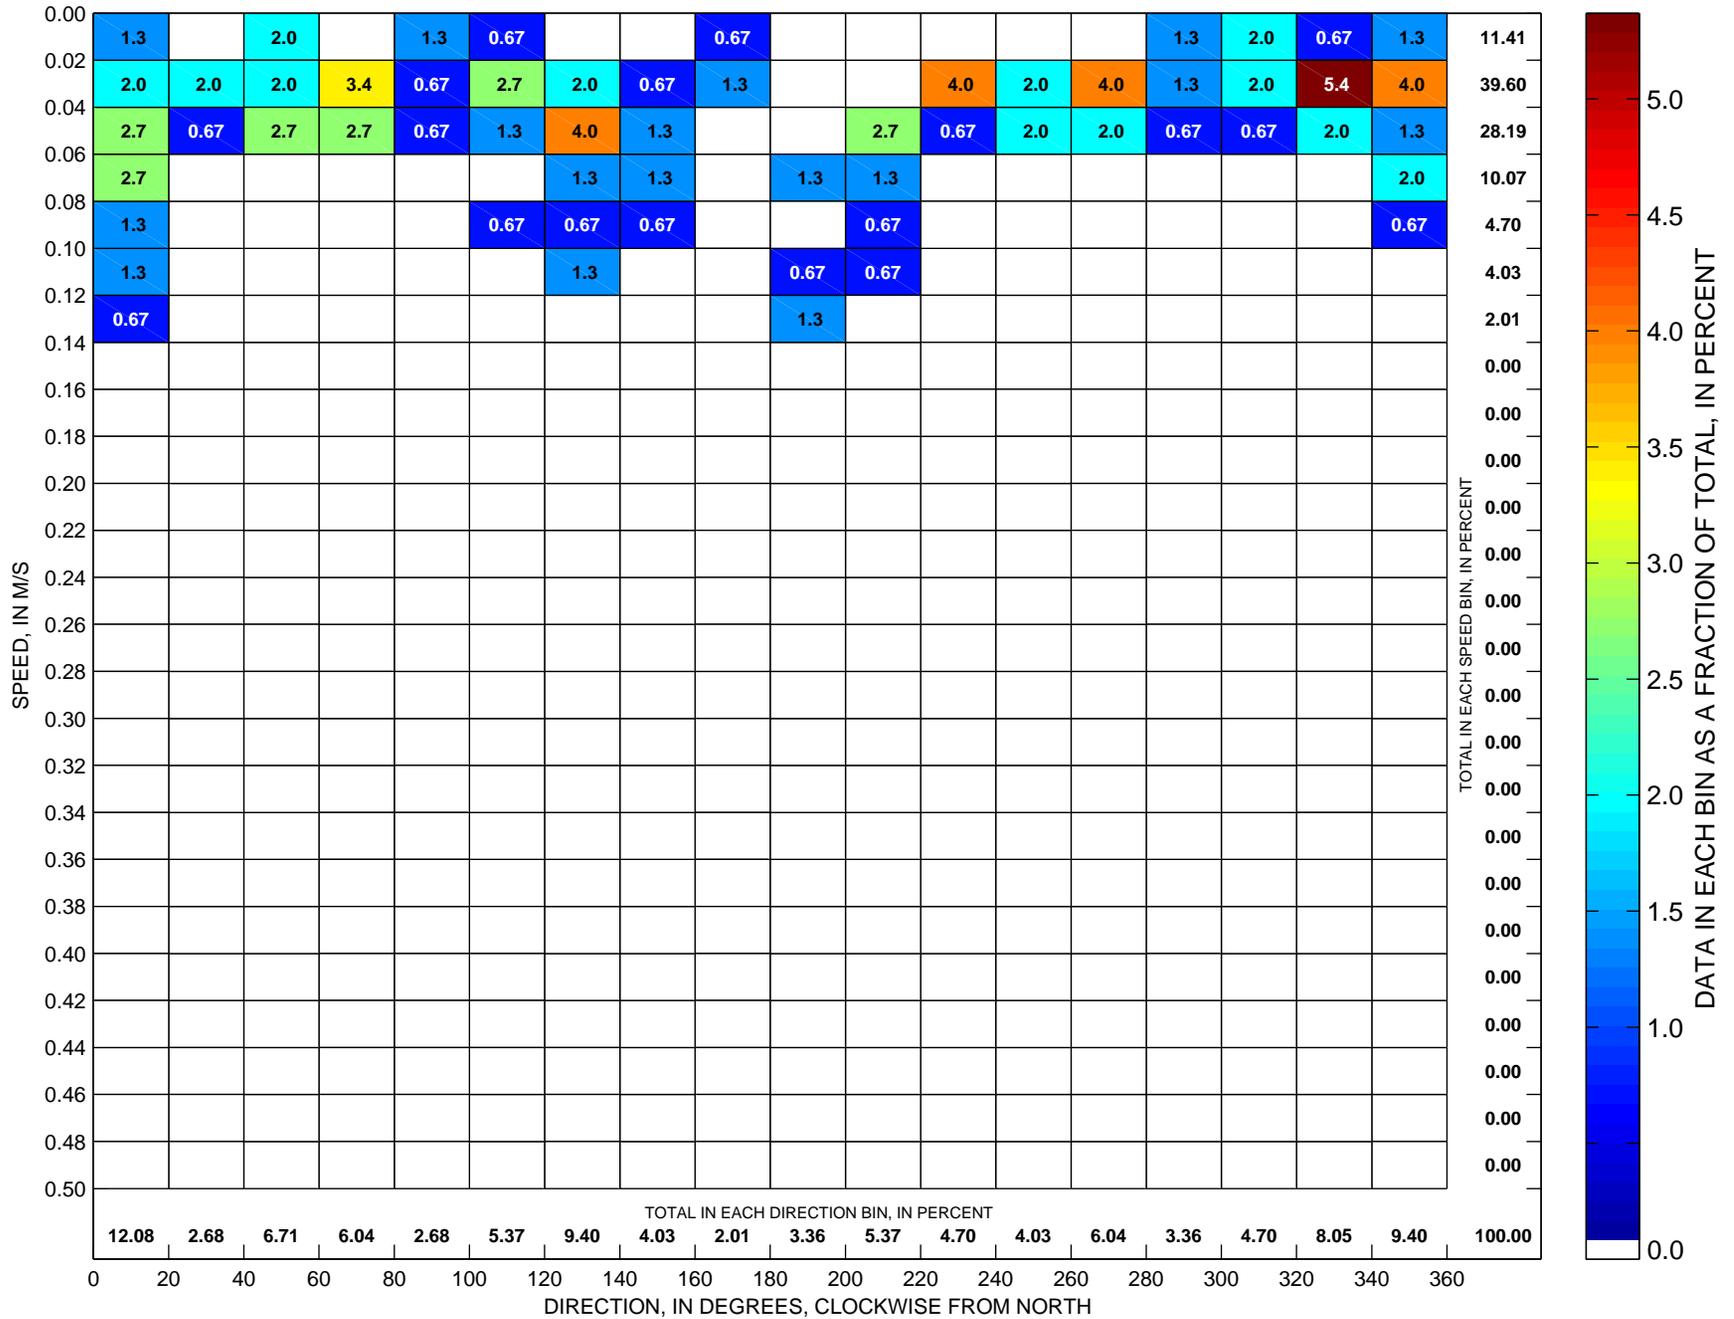

Total number of data points sorted is 1100, which is 75 percent of possible observations made during the full year.

Currents at LT-A Sorted by Speed and Direction Low-Pass Filtered ADCP Observations at ~15 m, 2005

Total number of data points sorted is 1228, which is 84 percent of possible observations made during the full year.

Currents at LT-A Sorted by Speed and Direction Low-Pass Filtered ADCP Observations at ~15 m, 2006

Total number of data points sorted is 149, which is 10 percent of possible observations made during the full year.
