

U.S. Geological Survey Virginia and West Virginia Water Science Center

The U.S. Geological Survey (USGS) serves the Nation by providing reliable scientific information to describe and understand the Earth; minimize loss of life and property from natural disasters; manage water, biological, energy, and mineral resources; and enhance and protect our quality of life. In support of this mission, the USGS Virginia and West Virginia Water Science Center works in cooperation with many entities to provide reliable, impartial scientific information to resource managers, planners, and the public.

A Wide Range of Scientific Expertise

Hydrologic Monitoring and Analysis

- Real-time streamgage and tide network operation
- Real-time precipitation network operation
- Streamflow statistics
- Hydrologic modeling
- Flood and drought monitoring, mapping, and analysis

Water-Quality Monitoring and Analysis

- Monitoring of diverse surface-water and groundwater environments
- State-of-the-art measurement of a broad range of contaminants
- Continuous water-quality monitoring
- Load and trend analysis
- Advanced statistical analysis and method development

Hydrogeologic Monitoring and Analysis

- Groundwater-level monitoring
- Monitoring of aquifer compaction and land subsidence
- Groundwater modeling
- Assessment of water availability
- Geophysical assessment of aquifer properties and characteristics

Ecological Monitoring and Analysis

- Fish and aquatic invertebrate monitoring
- Ecotoxicological monitoring
- Ecological streamflow assessment

Geospatial Analysis

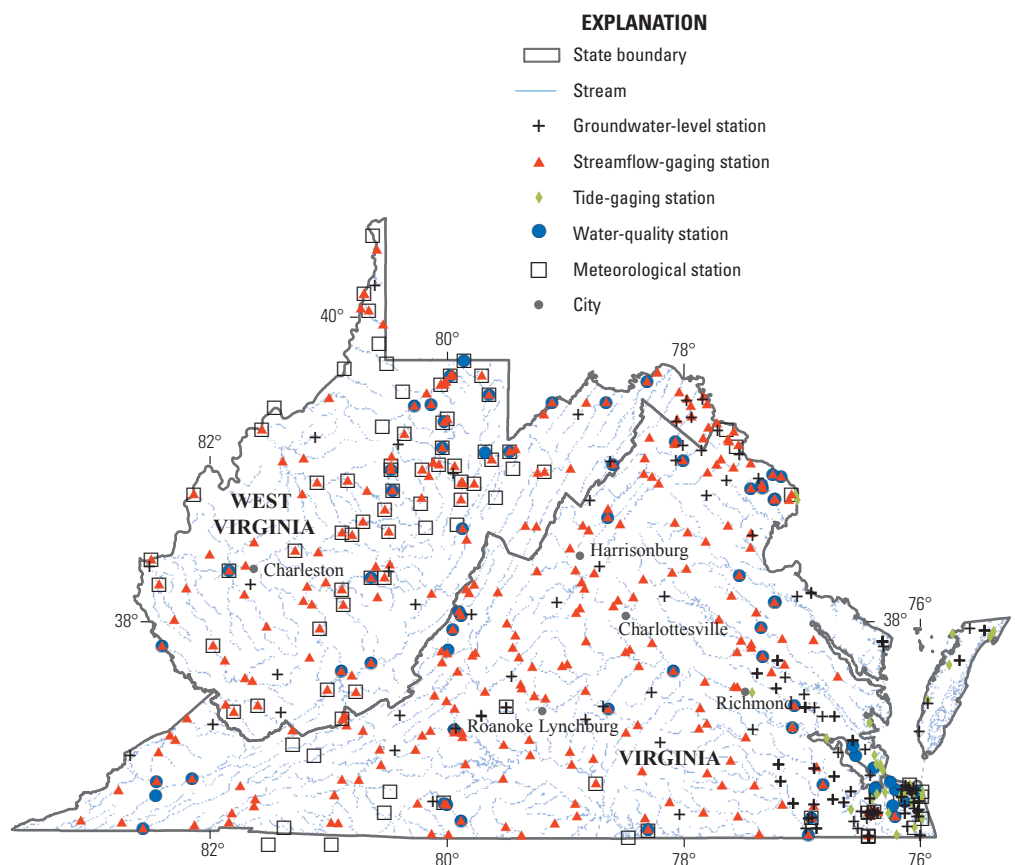

- Geospatial modeling
- Web-based map application development

Locations Throughout Virginia and West Virginia

- The Center employs a diverse staff of scientists, technicians, and administrative support professionals in multiple locations throughout Virginia and West Virginia.
- The Center operates and maintains extensive monitoring networks and conducts hydrologic investigations to quantify each component of the hydrologic cycle (fig. 1). These monitoring networks and investigative expertise enable the Center to address nearly any type of water-resources question or hydrologic data-collection need.

Partnering Opportunities

Most of the monitoring and investigations performed by the Center are conducted in cooperation with Federal, regional, State, and Local agencies, academic institutions, or private/industrial partners.

For information about opportunities for partnering with the USGS Virginia and West Virginia Water Science Center, contact dc_va@usgs.gov.
