

ARTESIAN WATER

LEGEND

- Area in which Cretaceous sandstone will probably yield flowing wells
- Depth to top of water-bearing Cretaceous sandstones
(First flow may be expected from 5 to 60 feet below top of sandstone except flow under greater pressure but water more mineralized at greater depth)
- Area probably too high to yield flowing wells
- 1300 Flowing wells
Depth to principal flow

Henry Gannett, Chief Topographer.
Jno. H. Renshaw, Topographer in charge.
Control by Geo. T. Hawkins.
Topography by Van H. Manning.
Surveyed in 1893.
