

Energy and Wildlife Research Annual Report for 2019

Dear friends,

I invite you to read the U.S. Geological Survey (USGS) Energy and Wildlife Research Annual Report for 2019, which highlights new research on the interactions of energy development with wildlife. Encompassing investigations of conventional and renewable energy development across the United States, from the Arctic Coastal Plain of Alaska to the balmy waters of Florida, the report features progress made by USGS scientists and partners in developing methods to minimize the impacts of energy infrastructure on wildlife. The report is available at <https://doi.org/10.3133/cir1458>.

Warm regards,

Mona Khalil, Ph.D.

U.S. Geological Survey
