

Explore Volcanoes and Volcano Hazards
at <http://volcanoes.usgs.gov>

Diagram of common volcano hazards. The U.S. Geological Survey Volcano Hazards Program (VHP) monitors unrest and eruptions at U.S. volcanoes, assesses potential hazards, responds to volcanic crises, and conducts research on how volcanoes work. When conditions change at a monitored volcano, the VHP issues public advisories and warnings to alert emergency-management authorities and the public. See <http://volcanoes.usgs.gov/> to learn more about volcanoes and find out what's happening now.
