

See Your State From Space!

Each of the 50 States in the United States is beautiful in its own way. That beauty can be seen from a unique perspective using satellite images taken from high above the Earth. These State images were created from multiple satellite images stitched together into one seamless image for each State. Names of major cities, administrative boundaries, and State flags have been added.

Landsat State Image Collection

The 50 State images were created from Landsat satellite data and orthorectified* with National Elevation Dataset (NED) data. The images were created for viewing enjoyment rather than for scientific interpretation.

Images of all 50 States, plus Puerto Rico, are available for download at no charge from <http://eros.usgs.gov/imagegallery>.

*Orthorectified satellite images are created from satellite data that have been geometrically corrected for terrain displacements, corrected for any satellite viewing variations, and have accurate geodetic coordinates associated with the data.
