

EXPLANATION

Magnetic contours with flight traverses, contours dashed where data is incomplete
Contours show total intensity relative to arbitrary datum

Magnetic contour enclosing area of lower magnetic intensity

Measured maximum or minimum intensity within closed high or closed low

Note

Aeromagnetic data are obtained and compiled along a continuous line, whereas ground magnetic surveys are made at separate points. Errors within the normal limits of any magnetic measurement may cause slight discrepancies between flight lines in an aeromagnetic map, which would be more obvious than similar discrepancies between points in a ground magnetic map. For this reason as much care should be exercised in evaluating magnetic features that appear as elongations along a single aeromagnetic traverse as in interpreting an anomaly indicated by a single ground station.

Index map showing location of mapped area

The aeromagnetic contours on this map are not continuous with those of GP 116 because of better and more continuous control in the later survey.

AEROMAGNETIC MAP OF THE JO-MARY MOUNTAIN AREA, PISCATAQUIS AND PENOBSCOT COUNTIES, MAINE
By James R. Balsley, Jean Blanchett, John R. Kirby, and others

Scale 1:62,500
