

EXPLANATION

NOTE

Aeromagnetic data are obtained and compiled along a continuous line, whereas ground magnetic surveys are made at separate points. Errors within the normal limits of any magnetic measurement may cause slight discrepancies between flight lines in an aeromagnetic map, which would be more obvious than similar discrepancies between points in a ground magnetic map. For this reason as much care should be exercised in evaluating magnetic features that appear as elongations along a single aeromagnetic traverse as in interpreting an anomaly indicated by a single ground station.

AEROMAGNETIC MAP OF PART OF THE EASTON QUADRANGLE,  
NORTHAMPTON COUNTY, PENNSYLVANIA, AND WARREN COUNTY, NEW JERSEY

By  
Randolph W. Bromery, John R. Henderson, Jr., Gerald L. Zandle, and others

SCALE 1:24 000

CONTOUR INTERVALS 50 AND 250 GAMMAS

1960

Base map by Topographic Division  
U. S. Geological Survey

TRUE NORTH  
APPROXIMATE MEAN  
DECLINATION, 1959

Aeromagnetic survey flown at 500 feet  
above ground, 1956
