

EXPLANATION

Magnetic contours and flight traverse
Contours dashed where data are
incomplete; contours show
total intensity relative to an
arbitrary datum.

Magnetic contour enclosing area
of lower magnetic intensity

Measured maximum or minimum
intensity within closed high or
closed low

NOTE

Aeromagnetic data are obtained and compiled along a continuous line, whereas ground magnetic surveys are made at separate points. Errors within the normal limits of any magnetic measurement may cause slight discrepancies between flight lines in an aeromagnetic map, which would be more obvious than similar discrepancies between points in a ground magnetic map. For this reason as much care should be exercised in evaluating magnetic features that appear as elongations along a single aeromagnetic traverse as in interpreting an anomaly indicated by a single ground station.
