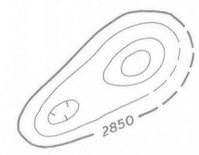
DEPARTMENT OF THE INTERIOR
UNITED STATES GEOLOGICAL SURVEY

GEOPHYSICAL INVESTIGATIONS
MAP GP-332

EXPLANATION



Magnetic contours showing total intensity magnetic field of the earth in gammas relative to arbitrary datum

Hachured to indicate closed areas of lower magnetic intensity; dashed where data are incomplete

×2646

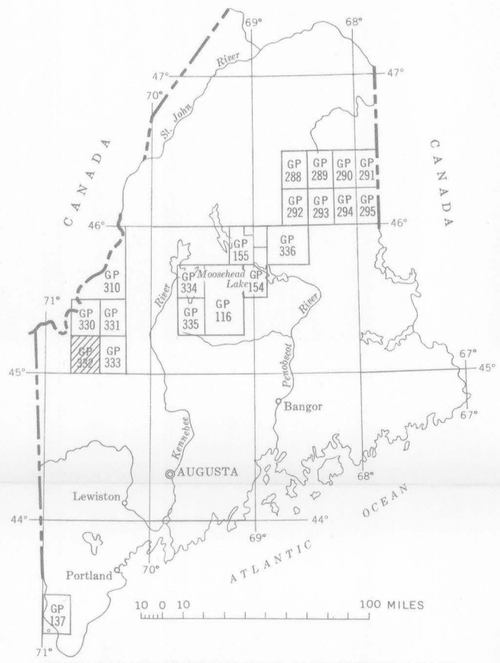
Measured maximum or minimum intensity within closed high or closed low

Flight path

Showing location and spacing of data

NOTE

Aeromagnetic data are obtained and compiled along a continuous line, whereas ground magnetic surveys are made at separate points. Errors within the normal limits of any magnetic measurement may cause slight discrepancies between flight lines in an aeromagnetic map, which would be more obvious than similar discrepancies between points in a ground magnetic map. For this reason as much care should be exercised in evaluating magnetic features that appear as elongations along a single aeromagnetic traverse as in interpreting an anomaly indicated by a single ground station



INDEX MAP OF MAINE SHOWING AEROMAGNETIC MAPS PUBLISHED BY THE U.S. GEOLOGICAL SURVEY

Base map by U.S. Geological Survey, 1932

Aeromagnetic survey flown at a barometric elevation of 3500 feet, 1959

AEROMAGNETIC MAP OF THE KENNEBAGO LAKE QUADRANGLE FRANKLIN COUNTY, MAINE

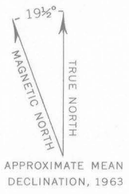
By

John R. Henderson, Francis P. Gilbert, and others

SCALE 1:62 500

1 ½ 0 1 2 3 MILES

CONTOUR INTERVAL 10 AND 50 GAMMAS



APPROXIMATE MEAN DECLINATION, 1963
