

(YANTO)

DEPARTMENT OF THE INTERIOR  
UNITED STATES GEOLOGICAL SURVEY

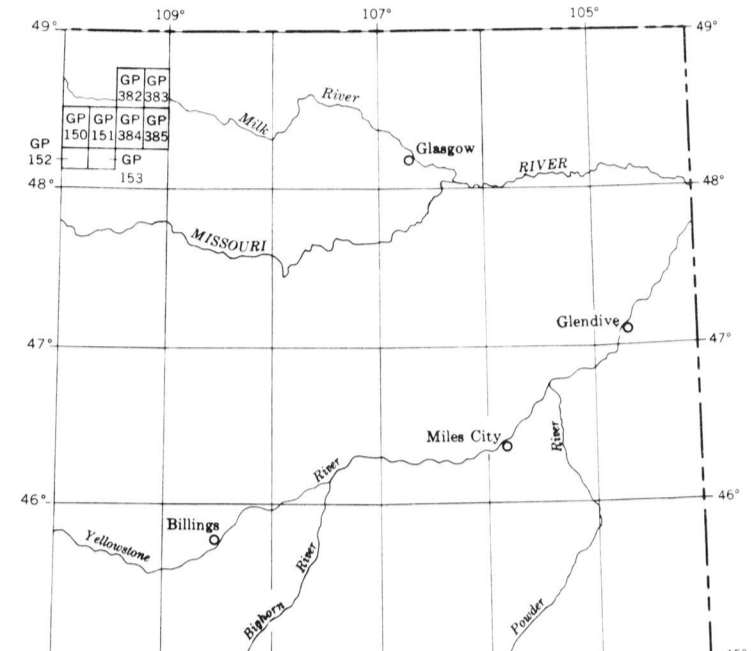

GEOPHYSICAL INVESTIGATIONS  
MAP GP-385

EXPLANATION

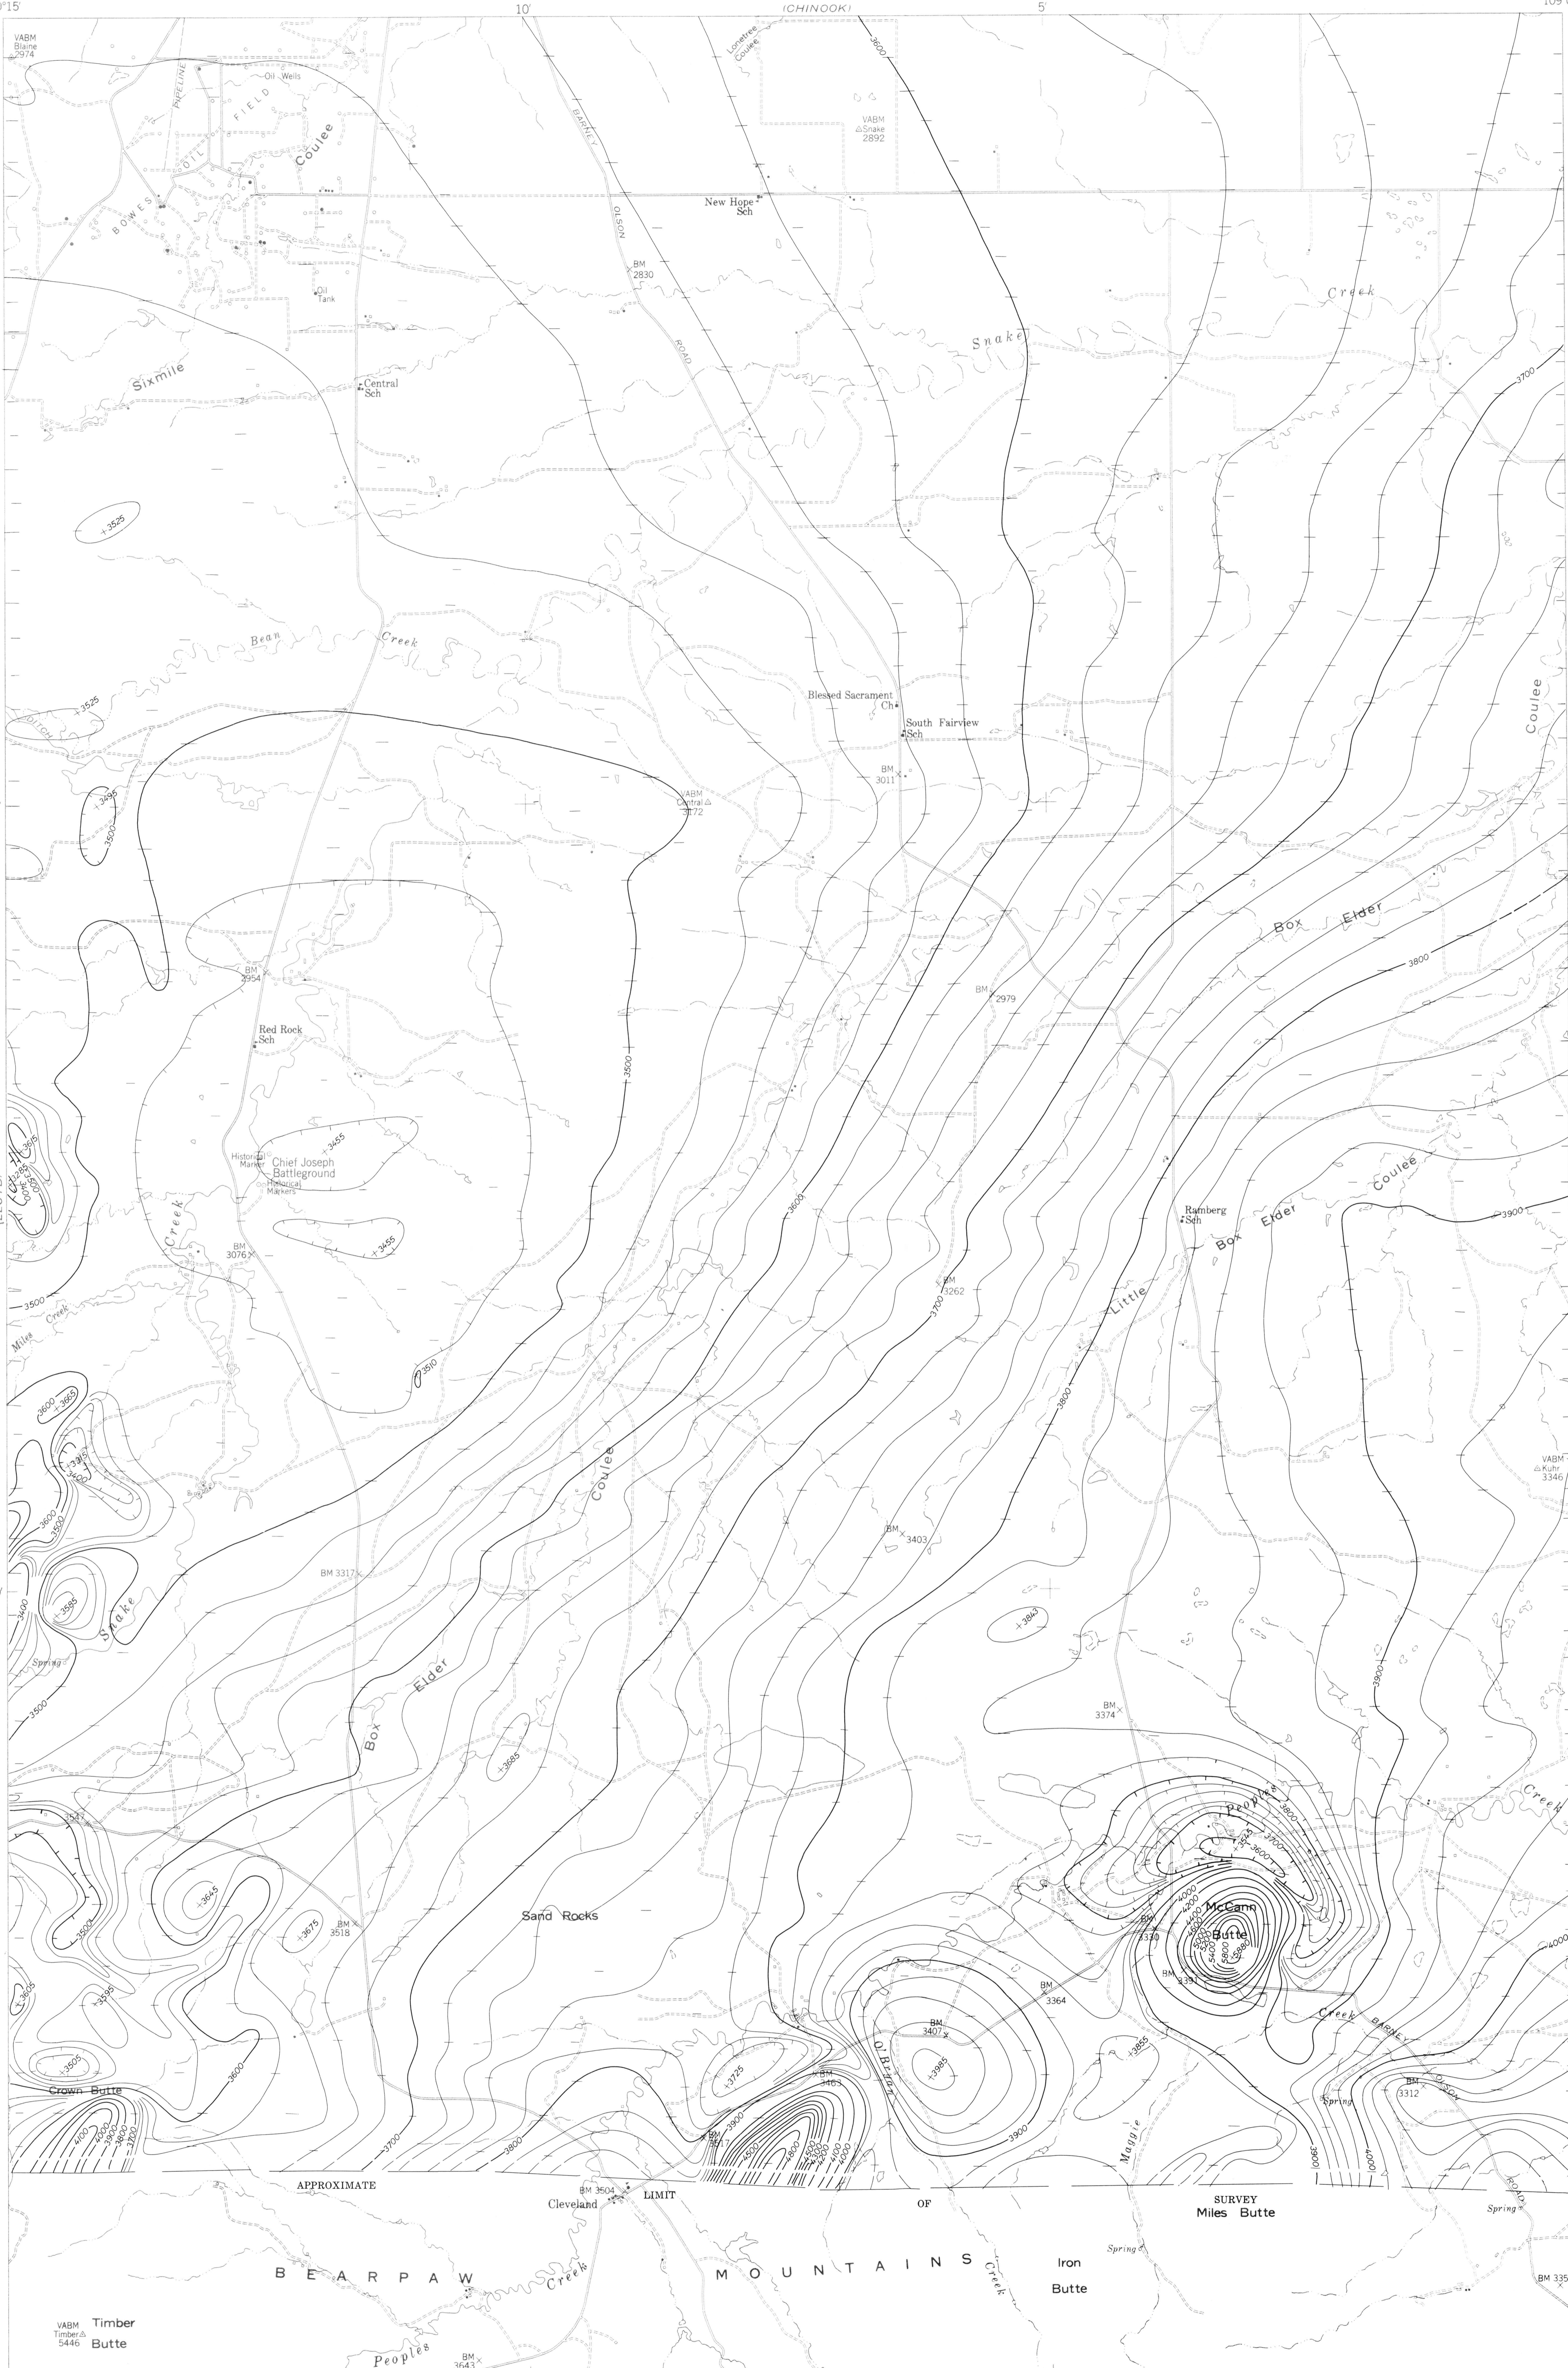

NOTE

Aeromagnetic data are obtained and compiled along a continuous line, whereas ground magnetic surveys are made at separate points. Errors within the normal limits of any magnetic measurement may cause slight discrepancies between flight lines in an aeromagnetic map, which would be more obvious than similar discrepancies between points in a ground magnetic map. For the reason as much care should be exercised in evaluating magnetic features that appear as elongations along a single aeromagnetic traverse as in interpreting an anomaly indicated by a single ground station.
