

EXPLANATION

Magnetic contours showing total intensity magnetic field of the earth in gammas relative to arbitrary datum
Hachured to indicate closed areas of lower magnetic intensity; dashed where data are incomplete

Measured maximum or minimum intensity within closed high or closed low

Flight path
Showing location and spacing of data

NOTE

Aeromagnetic data are obtained and compiled along a continuous line, whereas ground magnetic surveys are made at separate points. Errors within the normal limits of any magnetic measurement may cause slight discrepancies between flight lines in an aeromagnetic map, which would be more obvious than similar discrepancies between points in a ground magnetic map. For this reason as much care should be exercised in evaluating magnetic features that appear as elongations along a single aeromagnetic traverse as in interpreting an anomaly indicated by a single ground station

INDEX MAP OF IDAHO SHOWING
LOCATION OF GP-490

Base by U.S. Geological Survey, 1912

INTERIOR—GEOLOGICAL SURVEY, WASHINGTON, D. C.—1965—G64432

Aeromagnetic survey flown at 8000 feet
barometric elevation, 1960

AEROMAGNETIC MAP OF PART OF THE LANES CREEK QUADRANGLE, CARIBOU COUNTY, IDAHO

By
J. L. Meuschke and C. L. Long

SCALE 1:62 500

CONTOUR INTERVAL 10 GAMMAS

1965
