

EXPLANATION

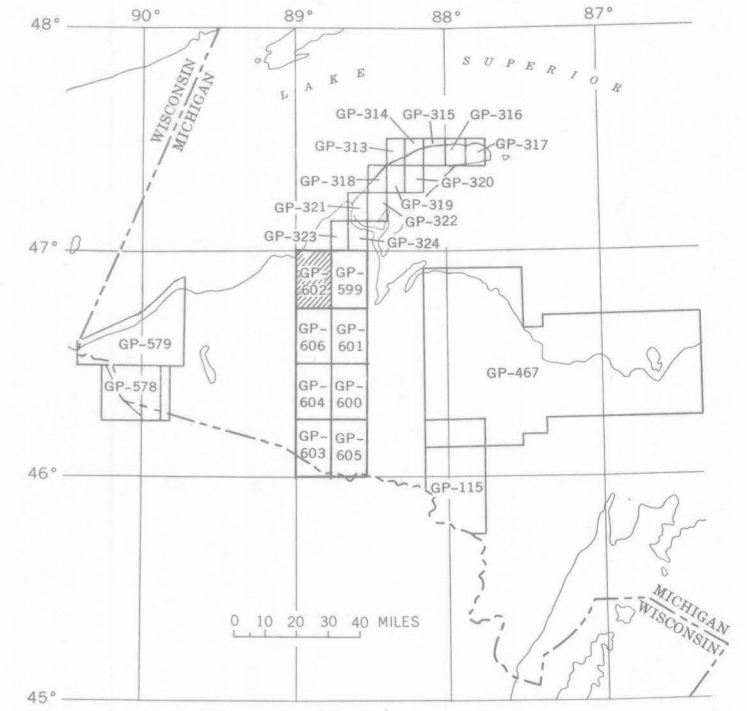

Magnetic contours
Showing total intensity magnetic field of the earth in gammas relative to arbitrary datum. Hachured to indicate closed areas of lower magnetic intensity, dashed where data are incomplete. Contour intervals are 50 and 250 gammas

Location of measured maximum or minimum intensity within closed high or closed low

Flight path
Showing location and spacing of data

NOTE
Aeromagnetic data are obtained and compiled along a continuous line, whereas ground magnetic surveys are made at separate points. Errors within the normal limits of any magnetic measurement may cause slight discrepancies between flight lines in an aeromagnetic map, which would be more obvious than similar discrepancies between points in a ground magnetic map. For this reason as much care should be exercised in evaluating magnetic features that appear as elongations along a single aeromagnetic traverse as in interpreting an anomaly indicated by a single ground station

INDEX MAP SHOWING AEROMAGNETIC MAPS PUBLISHED BY THE U.S. GEOLOGICAL SURVEY IN THE MICHIGAN UPPER PENINSULA. AREA OF GP-602 SHADED

Base by U.S. Geological Survey, 1954

**AEROMAGNETIC MAP OF PART OF THE WINONA QUADRANGLE
ONTONAGON AND HOUGHTON COUNTIES, MICHIGAN**

Compiled by J. R. Balsley and
C. W. Smith.
Aeromagnetic survey flown 500
feet above ground, 1947 and
1961

SCALE 1:62 500
CONTOUR INTERVAL 20 FEET
DATUM IS MEAN SEA LEVEL

1967
