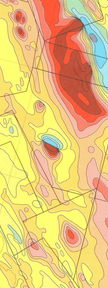
COMPOSITE MAGNETIC ANOMALY MAP OF THE CONTERMINOUS UNITED STATES WEST OF 96° LONGITUDE

By
Kevin R. Bond and Isidore Zietz
1987

EXPLANATION



MAGNETIC ANOMALY CONTOURS—Contour interval is 100 and 200 gammas (nanoTeslas). A geomagnetic reference field, adjusted to the times of the individual surveys, has been removed from these data. The zero level has been arbitrarily assigned.

Gray-toned lines mark all survey boundaries. Survey specifications, such as line spacings, directions, or altitudes may change across these boundaries. Changes in magnetic character across the boundaries may reflect these variations in survey specifications rather than differences in geology.

Details of data sources and compilation are provided in an accompanying text.
