GEOLOGIC MAP SYMBOLS

COMMONLY USED ON MAPS OF THE UNITED STATES GEOLOGICAL SURVEY

(Special symbols are shown in explanation)

	Contact — Dashed where approximately located; short dashed where inferred; dotted where concealed
	Contact — Showing dip; well exposed at triangle
	Fault — Dashed where approximately located; short dashed where inferred; dotted where concealed
	Fault, showing dip — Ball and bar on downthrown side
	Normal fault — Hachured on downthrown side
	Fault — Showing relative horizontal movement
	Thrust fault — Sawteeth on upper plate
	Anticline — Showing direction of plunge; dashed where approximately located; dotted where concealed
	Asymmetric anticline — Short arrow indicates steeper limb
	Overturned anticline — Showing direction of dip of limbs
	Syncline — Showing direction of plunge; dashed where approximately located; dotted where concealed
	Asymmetric syncline — Short arrow indicates steeper limb
	Overturned syncline — Showing direction of dip of limbs
	Monocline — Showing direction of plunge of axis
	Minor anticline — Showing plunge of axis
	Minor syncline — Showing plunge of axis

Strike and dip of beds — Ball indicates top of beds known from sedimentary structures

70° Inclined Horizontal
 Vertical 40° Overturned

Strike and dip of foliation

20° Inclined Vertical Horizontal

Strike and dip of cleavage

15° Inclined Vertical Horizontal

Bearing and plunge of lineation

15° Inclined Vertical Horizontal

Strike and dip of joints

40° Inclined Vertical Horizontal

Note: planar symbols (strike and dip of beds, foliation or schistosity, and cleavage) may be combined with linear symbols to record data observed at same locality by superimposed symbols at point of observation. Coexisting planar symbols are shown intersecting at point of observation.
