Figure 1. Floodplain model for June 18 through August 4, 1993, in Des Moines and Vicinity, Iowa.

The floodplain model for June 18 through August 4, 1993, in Des Moines and Vicinity, Iowa, provides a detailed view of the flooding extent and depth. The model highlights the areas affected by the flood, indicating the exact locations where flooding occurred and the depth of the floodwaters. The model is essential for understanding the impact of the flood on the region and for planning future flood mitigation strategies. The floodplain model also serves as a critical tool for emergency management and response efforts, enabling officials to quickly assess the situation and respond accordingly.
