

EXPLANATION

- Outcrop or well where rocks of mapped interval are present
- Where triangle is inverted, rocks of next higher interval are absent. Numbers correspond to those in source index in text
- Outcrop or well where rocks of mapped interval are absent
- Where triangle is pointed upward, rocks of next higher interval are present. Number corresponds to those in source index in text
- Area in vicinity of Permian rocks where older rocks are exposed
- Area in vicinity of rocks of mapped intervals where younger rocks have not been penetrated by drill
- Area where mapped interval contains salt (minimum: 10 percent)

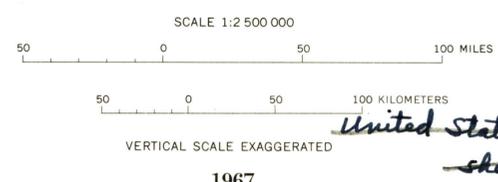

NOTES

Lines of section for cross sections Q-Q' to T-T' (interval A) are shown on plate 3; those for cross sections Q-Q' to S-S' (interval B) are on plate 4.

All stratigraphic names except those that are italicized are in current usage by the U.S. Geological Survey. Names which have been incorrectly applied to a stratigraphic unit are included within quotation marks
