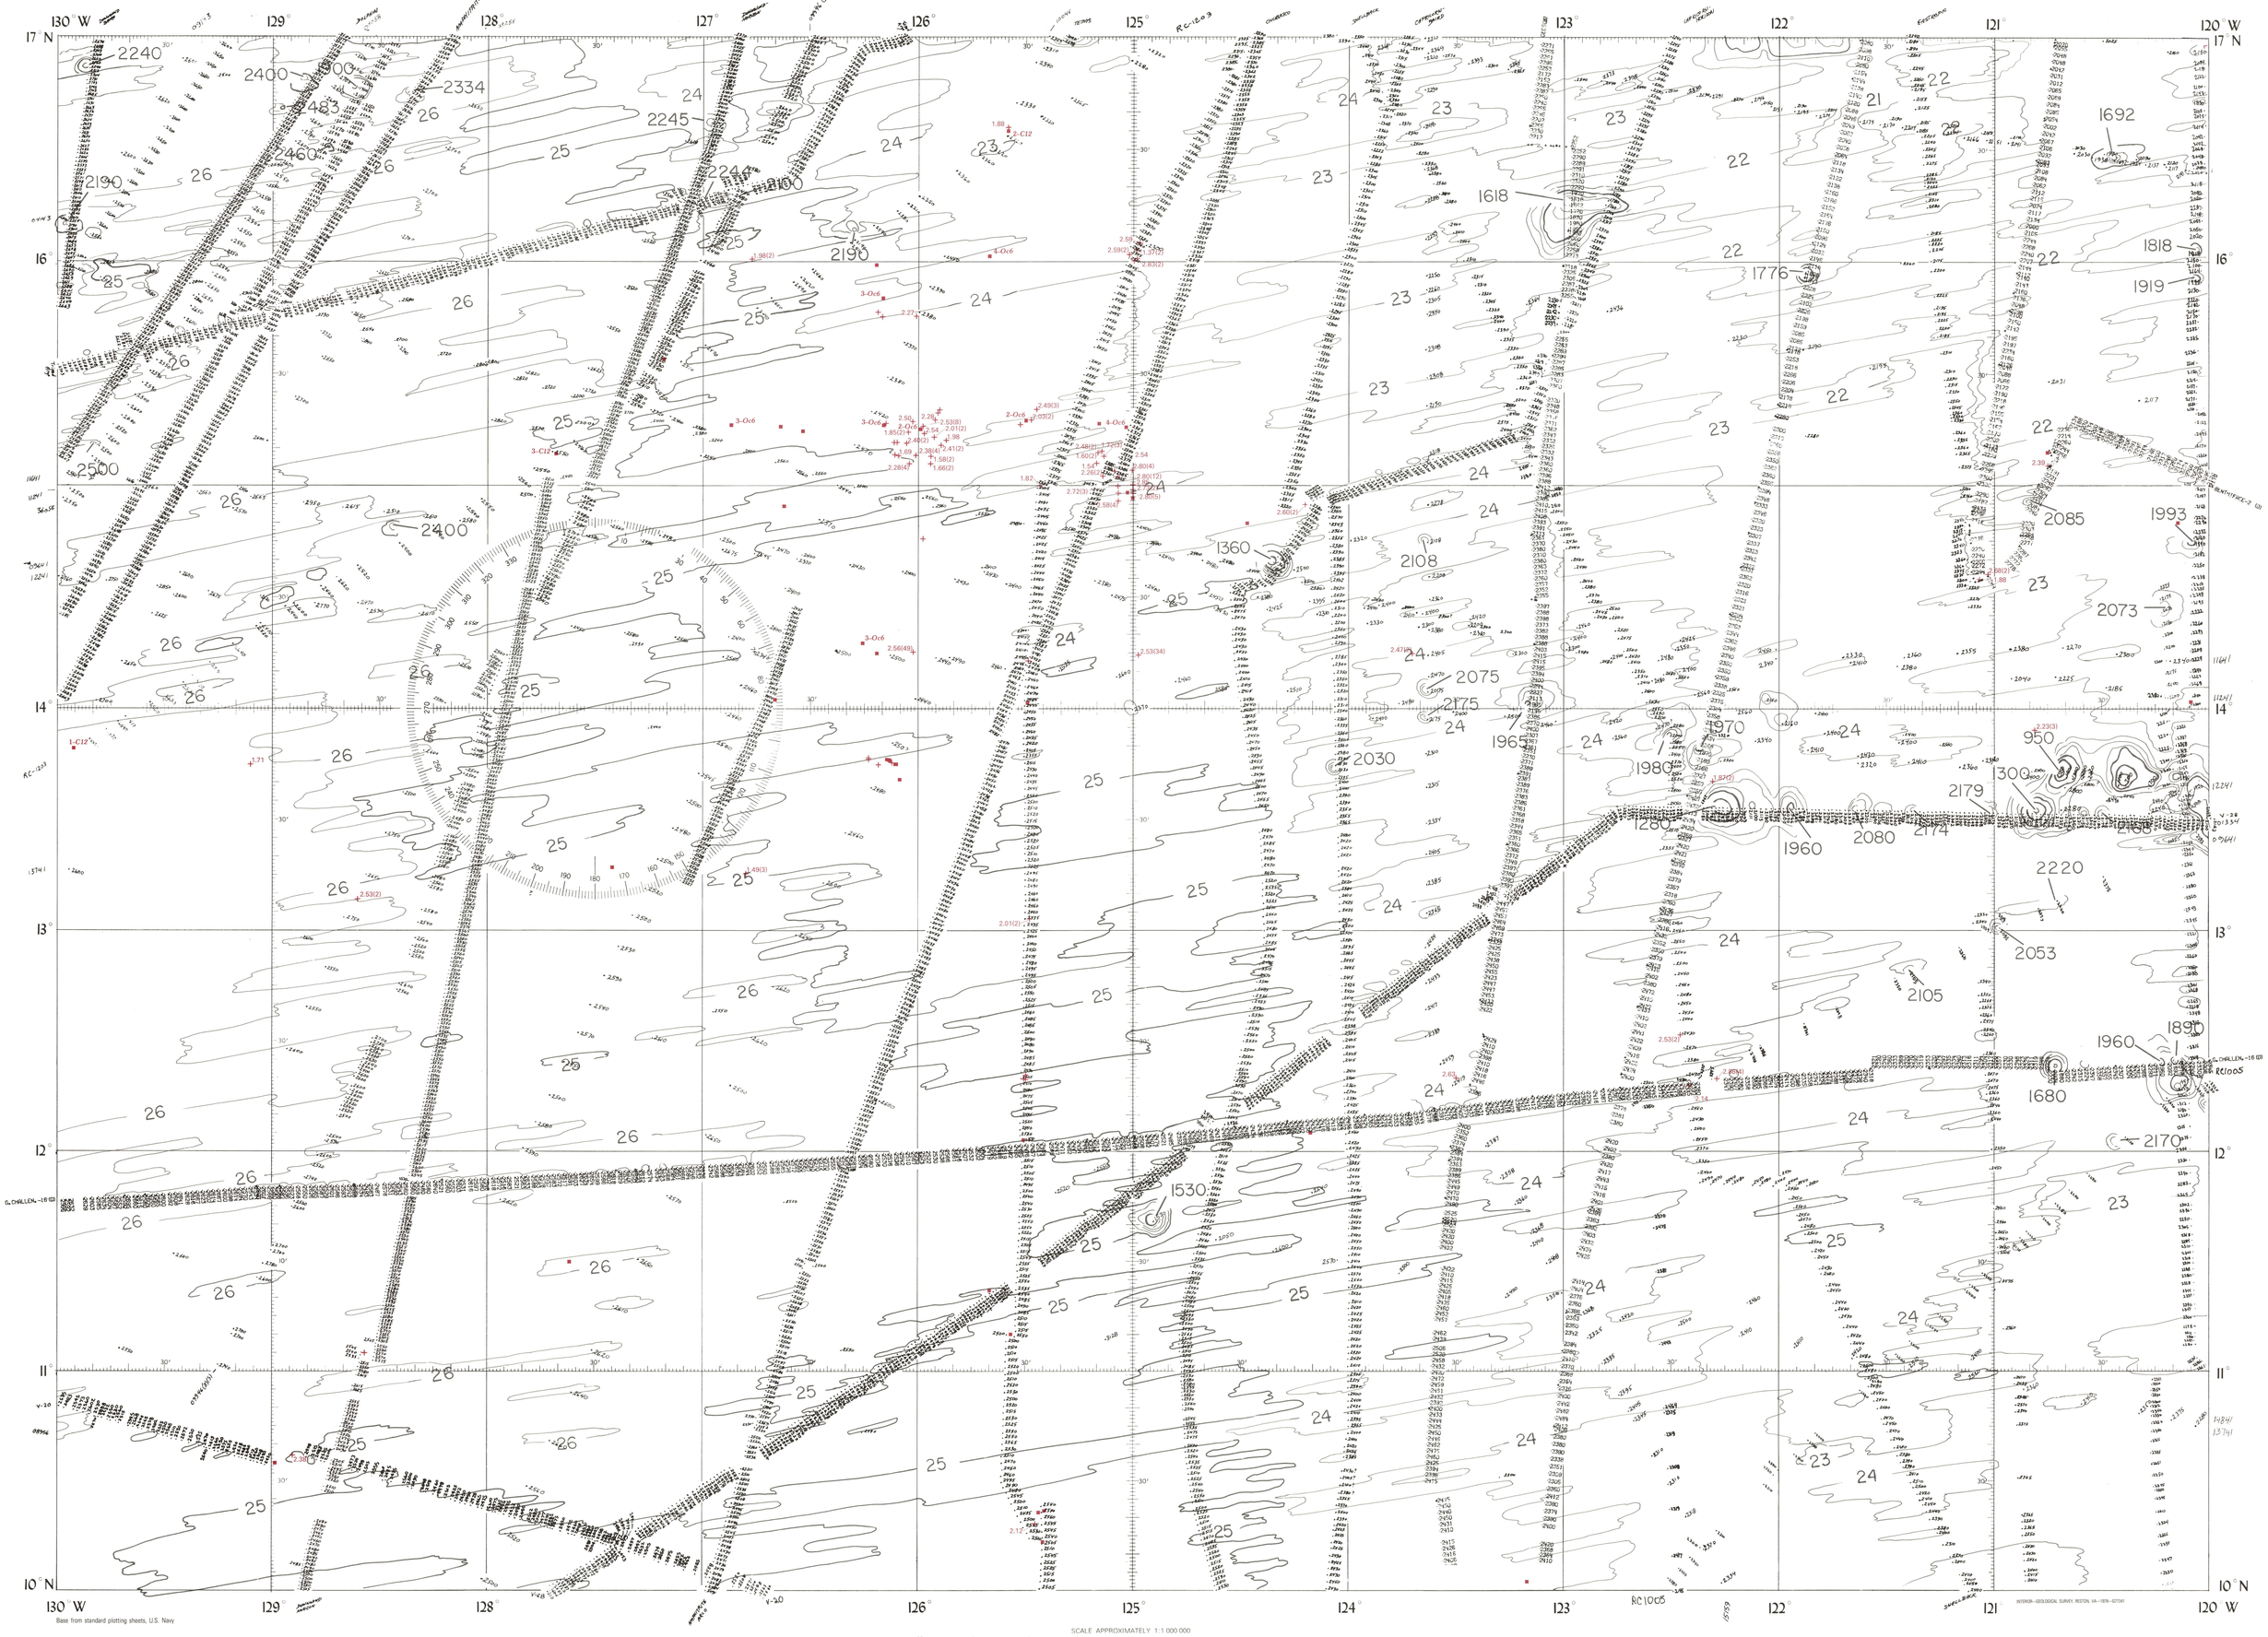
UNITED STATES GEOLOGICAL SURVEY

PREPARED UNDER GRANTS FROM THE U.S. BUREAU OF MINES FOR THE
OCEAN MINING ADMINISTRATION, DEPARTMENT OF THE INTERIOR

MISCELLANEOUS INVESTIGATIONS SERIES
MAP I-1094-K



Base from standard plotting sheets, U.S. Navy

SCALE APPROXIMATELY 1:1 000 000

25 0 25 50 75 100 125 150 175 KILOMETERS

25 0 25 50 75 MILES

CONTOUR INTERVAL 100 t

BATHYMETRIC AND NODULE ASSESSMENT MAP, 1303N, NORTHEAST EQUATORIAL PACIFIC OCEAN

Contour data assembled, evaluated, and interpreted by Bruce C. Heezen and Marie Tharp assisted by S. Blythe, R. Bodnar, R. Brunke, D. Jicha, H. Jicha, T. Kaul, M. McClellan, and F. Rosselot, Lamont-Doherty Geological Observatory, Department of Geological Sciences, Columbia University, Palisades, NY 10964

Nodule data from the Scripps Institution of Oceanography Sediment Data Bank, compiled by Jane Z. Frazer and Mary B. Fisk, Scripps Institution of Oceanography, University of California, La Jolla, CA 92093

1978

Sources

The soundings on this map were principally assembled from compilations made since 1949 by the following organizations.

Columbia University; Department of Geological Sciences—Lamont-Doherty Geological Observatory (initiated in 1949 with the support of the Office of Naval Research); includes principally precision depth soundings by research vessels.

Department of Defense, Defense Mapping Agency Hydrographic Center-US Naval Oceanographic Office (organized on 4°=1° Longitude format in 1949). Includes precision ans nonprecision soundings of naval and other vessels and all pre-1950 echo soundings.

University of California; Scripps Institution of Oceanography. (Initiated in 1950 with the support of Office of Naval Research). Includes principally precision soundings from research vessels.

Contours

Soundings from listed sources were contoured at publication scale using a plate-tectonics working hypothesis and bathymetric trends derived from both magnetic anomalies and fracture-zone lineations. Vessel tracks are indicated by numerical values in tau units and the vessel and voyage number are shown at an extremity of each track. Approximate depths of contours in meters can be determined from the conversion table.

Conversion Table

Echo soundings given in total travel time (surface, to seabed, to surface) and expressed in tau units (¼sec-ond). Contour interval: 100 t or ¾ second.

Tau	Meters
200	375
400	716
600	1119
800	1490
1000	1862
1200	2233
1400	2608
1600	2985
1800	3361
2000	3740
2200	4122
2400	4508
2600	4890
2800	5272
3000	5662
3200	6050

2.23(3) + Nodules present and averaged combined copper and nickel content in weight percent. Total number of analyses averaged shown in parentheses

\+ Nodules present but no reported analyses

3-Oc6 ■ Site of photograph showing bottom coverage by ferromanganese nodules, research vessel, and cruise number. Photograph available from Lamont-Doherty Geological Observatory
Coverage: 1, 0-25%; 2, 26-50%; 3, 51-75%; and 4, 76-100%
Research vessels:
M, R/V Moana Wave, University of Hawaii
Oc, R/V Oceanographer, National Oceanographic and Atmospheric Agency
C, R/V Robert Conrad, Lamont-Doherty Geological Observatory
V, R/V Vema, Lamont-Doherty Geological Observatory

■ No nodules reported in samples or in photographs
