EXPLANATION OF PRECAMBRIAN ROCKS

The Precambrian rocks are dominantly greenstone and gneiss, with lesser amounts of quartzite, schist, and metavolcano-sedimentary rocks. The greenstone is dominantly biotite gneiss, with minor amounts of amphibolite and metabasalt. The gneiss is dominantly biotite gneiss, with minor amounts of amphibolite and metabasalt. The metavolcano-sedimentary rocks are dominantly quartzite and schist, with minor amounts of metavolcano-sedimentary rocks.
