

NOTES ON BASE
The lunar surface features shown on this map were based primarily on pictures taken by Lunar Orbiter spacecraft. Data from Apollo orbital flights and the rectified lunar atlas (Whitaker and others, 1963) were also used. Interpretation and artwork portrayal of the shaded relief are by Eric L. Blum and Patricia M. Bridges.

PROJECTION
The Mercator and Polar Stereographic projections are used for this map series. The scale of the series is 1:5,000,000 at the equator and 1:5,000,000 at lat ±34° and at the poles. The projections have a common scale of 1:4,208,000 at lat ±45°.

CONTROL
Horizontal positions are tied to the Lunar Positional Reference of 1974 (Schinnerman, 1975). The evaluated accuracy of the system ranges from 1 to 15 km at 90% probability.

NOMENCLATURE
Abbreviation for Moon, 1:5,000,000 series; center of sheet, lat 0°, long 0°; shaded relief map (R).
