EXPLANATION

SAND AND GRavel
Ranges from 100 percent coarse particles (larger than 2 mm in diameter) to 25 percent coarse particles and 75 percent medium particles (0.05 to 2 mm in diameter). Locally contains small amounts of silt and clay.

This map shows the distribution of tannins and coarse aggregate exposed at the surface. No information is given on the quality or quantity of the materials. Such information should be obtained from on-site investigations.
