MAP SHOWING DRAINAGE AREAS, GUILFORD QUADRANGLE, CONNECTICUT

By
Mendall P. Thomas and John E. Palmer
1975

EXPLANATION

Map shows stream systems and drainage areas that contribute streamflow to selected sites on streams.

Drainage areas shown have not been adjusted for the manmade changes in the natural regimens such as storm sewers, diversion dams, canals, and tunnels.

STREAM ,SYSTEMS

AREA DRAINED BY SMALLER STREAM SYSTEMS TRIBUTARY TO LONG ISLAND SOUND

DRAINAGE-AREA BOUNDARY

3.85
TOTAL DRAINAGE AREA- Number indicates area in square miles that contributes streamflow to selected site on a stream (area in square miles x 2.59 = area in square kilometres). Where the selected site is a mouth of tributary stream, generally two numbers and associated drainage-area boundaries are shown. One number is the square miles of drainage area of tributary stream at its mouth, and the other number is the square miles of drainage area of the larger or main stream immediately upstream from the mouth of tributary stream. The square miles of drainage area of the larger or main stream immediately downstream from the mouth of tributary stream is, therefore, the sum of the two numbers shown.
