

EXPLANATION

Contours show the altitude of the bedrock surface. The position of the contours is based largely on data from wells and test holes (Bingham and others, 1975; Mazzaferro, 1973) and the published geologic map (Simpson, 1968) supplemented by knowledge of the geologic history of the region.

The map shows the configuration of the bedrock surface if all unconsolidated earth materials were removed.

250

CONTOUR, In feet above mean sea level. Hachures show closed depressions. Contour interval 50 feet (15 metres).
