MAP A. COPPER IN THE NONMAGNETIC FRACTION OF HEAVY-MINERAL CONCENTRATES

MAP B. COPPER IN THE MAGNETIC FRACTION OF HEAVY-MINERAL CONCENTRATES

Figure 1: Histogram showing concentration of copper in the nonmagnetic fraction of heavy-mineral concentrates, with a bar of 20 parts per million (ppm). The data range from 0 to 200 parts per million, with most values falling between 0 and 50 parts per million.

Figure 2: Histogram showing concentration of copper in the magnetic fraction of heavy-mineral concentrates, with a bar of 20 parts per million (ppm). The data range from 0 to 200 parts per million, with most values falling between 0 and 50 parts per million.
