GLACIAL MAP OF SOUTHERN PENINSULA OF MICHIGAN

By Frank Leverett and Frank B. Taylor
In cooperation with the Geological Survey of Michigan
Scale: 1 inch equals 60 feet

Prepared chiefly from original field data and boa data furnished in reports of the Michigan Geological Survey, 1918

NOTES: Some of the 50-foot contours are based on topographic maps of certain municipalities. In the areas where there are few or no field measurements, the 200-foot contour has been used with some resulting rounding.
