IRAQ

THE MINERAL INDUSTRY OF IRAQ

By Philip A. Szczesniak

Hydrocarbons were a leading segment of the economy of Iraq in 2017 and 2018, accounting for most of the country's exports of goods (Organization of the Petroleum Exporting Countries, 2019, p. 17–19). The country ranked fourth among the leading producers of crude petroleum (Organization of the Petroleum Exporting Countries, 2019, p. 31). The legislative framework for the mineral sector in Iraq is provided by the Ministry of Industry and Minerals law No. 38 of 2011 and the Conservation of Hydrocarbon Resources law No. 84 of 1985, respectively. Data on mineral production are in table 1. Table 2 is a list of major mineral industry facilities. More-extensive coverage of the mineral industry of Iraq can be found in previous editions

of the U.S. Geological Survey Minerals Yearbook, Volume III, Area Reports—International—Africa and the Middle East, which are available at https://www.usgs.gov/centers/nmic/africa-and-middle-east.

¹The fertilizer production unit U400 produces triple superphosphate (TSP), monoammonium phosphate (MAP), and compound fertilizer (NPK).

²Fluoride salts production unit U500, which had the capacity to produce 11,000 metric tons per year of aluminum fluoride, was idle because of technical problems but was being used to produce unknown quantities of ammonium chloride, pure silica, silica gel, sodium fluorosilicate, sodium phosphate, and zeolites.

³No production has been reported since 2003.

⁴No production has been reported since 2015.
