CYPRUS [ADVANCE RELEASE]

THE MINERAL INDUSTRY OF CYPRUS

By Sinan Hastorun

In 2019, the production of mineral commodities—notably bentonite, cement, copper, gold, gypsum, hydrated lime, iron oxide pigments (umber and ocher), limestone (including havara), sand and gravel, and silver—represented only a minor part of the economy of Cyprus (Mines Service, 2020). The legislative framework for the mineral sector in Cyprus is provided by the Mines and Quarries Law of 1965 as amended in 1995, 2001, and 2003. Data on mineral production are in table 1. Table 2 is a list of major mineral industry facilities. More-extensive coverage of the mineral industry of Cyprus can

be found in previous editions of the U.S. Geological Survey Minerals Yearbook, volume III, Area Reports—International—Europe and Central Eurasia, which are available at <https://www.usgs.gov/centers/nmic/europe-and-central-eurasia>.

¹Table includes data available through August 11, 2020. All data are reported unless otherwise noted. Estimated data are rounded to no more than three significant digits.

²In addition to the commodities listed, fertilizers, perlite, and semimanufactured steel may have been produced, but available information was inadequate to make reliable estimates of output.

³Mineral production from areas of northern Cyprus that are administered by Turkish Cypriots is not included because available information was inadequate to make reliable estimates of output.

⁴The copper content of solvent extraction output at the mine level is the same as electrowon refinery output because copper produced in the solvent extraction and electrowinning process is typically reported only at the refinery level.
