## INTRODUCTION

This bibliography contains 3,676 references on geology of the Black Hills in South Dakota and Wyoming. For purposes of this report, the Black Hills is considered to be that area covered by the geologic maps in DeWitt and others (1985) and DeWitt and others (1989); it therefore includes the mountainous area classically known as the Black Hills and some surrounding prairie. Notably, the area does not include the Bad Lands of South Dakota nor the bulk of the Powder River Basin in Wyoming.

Disciplines covered, in decreasing order of thoroughness, include field geology (maps), economic geology (both metallic and nonmetallic deposits), geochronology, structural geology, petrology (igneous, metamorphic, and sedimentary), geophysics, mineralogy, metallurgy, geochemistry, paleontology, petroleum geology, stratigraphy, engineering geology, hydrology, historical expeditions, and miscellaneous fields. U.S. Government and State Government publications, journals, periodicals, magazines, books, M.S. and Ph.D. theses, and abstracts are included in the bibliography.

References for South Dakota are more complete than those for Wyoming. Both states, however, contain hundreds to thousands of references. Completeness of records for time periods differs: 1852-1917 is complete; 1961-1988 is mostly complete; 1918-1945 is relatively complete; and 1946-1960 is the least complete. However, no time period is totally devoid of references.

BHBIB is available in three formats. The first (Open-File Report 89-443A) is a dual-column, double-sided paper copy of the references, approximately 90 pages long. The second and third formats are floppy disks of the bibliography for use on IBM-compatible personal computers.

The second format (Open-File Reports 89-0443B and 89-0443C) is an ASCII file(s) of the bibliography, on 360Kb or 1.2Mb, 5¼" floppy disks respectively, in publication style for use with most word processors. Because of the size of the file(s) (722K bytes), a hard disk is necessary for using the bibliography, in its entirety, with a word processor. The bibliography could be split into smaller files, which would contain only a part of the total list of references, and be used on a dual floppy drive system. The ASCII file(s) can be converted to WordPerfect, Volkswriter, Wordstar, or other word processing formats by using various translation programs available in the public domain. Once in a word processing format, the bibliography can be searched for author, year, title, citation, and phrases, or combinations of the above.

The third format (Open-File Reports 89-0443D and 89-0443E) is an entry-delimited ASCII file(s), on 360Kb or 1.2Mb, 5¼" floppy disks, respectively, of the bibliography for use with most database managers. A hard disk is also necessary for using this smaller-than-722Kb file. Each reference is separated into author, year, title, and citation fields by commas and quotation marks, which enables the file to be imported into many database managers, including dBase and PARADOX. Because search and sort capabilities of the database managers are much greater and faster than word processors, interested users may prefer this format over the simple ASCII file(s) for word processors.

As with all bibliographies, and especially for an area as diverse as the Black Hills, some citations have undoubtedly been overlooked. We regret those omissions and hope that this bibliography will be of aid to researchers and students interested in the geology of the Black Hills.

#### ACKNOWLEDGMENTS

Anna Burack Wilson, A.L. Lisenbee, Tom Johnson, Pat Drouillard, and the staff of the U.S. Geological Survey library, Denver, Colorado, were of great help in compiling and checking for errors in the bibliography. Carol N. Gerlitz wrote the computer program to translate ASCII files to the entry-delimited ASCII files used in Open-File Reports 89-0443D and 89-0443E; her enthusiastic help is greatly appreciated. J.J. Norton, D.M. Sheridan, W.A. Cobban, E.E. Foord, W.I. Finch, G.A. Izett, C.L. Pillmore, N.M. Denson, and F.R. Karner proofread various sections of the bibliography; we thank them for their help, but accept full responsibility for errors or omission.
