The tungsten mine and the adjacent Wible mine are on the west flank of the California Central Valley. The mine area is located in the Sierra Nevada and Tuolumne County, California. The ore body is several miles long and has a width of about 100 feet. It is composed of scheelite, wolframite, and molybdenite. The tungsten content is estimated to be about 1%.

The mine is operated by the Wible Mining Company, which has been in operation since 1910. The company produces tungsten concentrate and sells it to various tungsten processing plants.
