SECTION ALONG LINE A-A'

Direction of dip between holes A1 and A2 uncertain.

Very little core.
Assays mostly from sludge.

Bed dip from 440' to 400' The thickness from 40' to 60' distance along the hole.

Bed dip from 400' to 600' The thickness from 60' to 90' distance along the hole.

Drillings probably disturbed by core loss and cutting of beds - only plan of cross section.

SECTION ALONG LINE B-B'

EXPLANATION

- Quartzite
- Iron-bearing non-limy rocks
- Iron-bearing interbedded limstone and non-limy rocks
- Granitic rocks and gneiss
- Iron ore containing more than 40% Fe and averaging 45-47% Mostly included in reserves
- Inferred ore
