Figure 16.--East bank of the Nenana River, looking east from Healy, showing layers of blue-gray terrace gravel deposited by the Nenana River (heavy dots) resting on truncated beds of Nenana gravel dipping 45° north, and overlain by thick deposits of yellow-brown alluvium derived from the mountain of Nenana gravel in the background. The lower terrace corresponds to the Carlo re-advance, the upper terrace to the Riley Creek glaciation. Sketched from a photograph.
