(1) Sample 1, fresh kyanite-bearing rock blasted from Mt. Montro; Sample 4, disintegrated rock debris overlying bedrock on road 0.5 km W of Harrisville; Samples 7 and 8, kyanite-bearing alluvial gravels from swamps near the road 3 mi and 1.8 mi W of Lloydsburg. Analyses and beneficiation tests made at the Strassa laboratory, Sweden.

(2) Samples 4, 7, and 8 are washed and hand-jigged concentrates of original materials.

(3) Concentration effected in liquid with specific gravity of 3.06.

(4) Separated by Franz isodynamic separator in two passes at 0.5A and 1.5-1.7A; tilt values not specified.

(5) Total Fe for Spec. P-27-R, types A, B, and C, calculated from values given for  $\text{Fe}_2\text{O}_3$ .

\* Value not stated by authors.
