Maps showing locations of holes drilled in 1953 and 1954

by U.S. Geological Survey, Beaver Mesa area,

Mesa County, Colorado, and Grand County, Utah

From May 4, 1953, to October 30, 1954, the U.S. Geological Survey drilled 212 diamond-drill holes in the Beaver Mesa area, Mesa County, Colorado, and Grand County, Utah, to explore for uranium- and vanadium-bearing deposits. The deposits are primarily in the upper part of the Salt Wash Member of the Jurassic Morrison Formation.

The accompanying maps of the area explored are an index map (fig. 1) and a generalized geologic map showing locations of drill holes (fig. 2). Logs of 212 holes identified on these maps may be inspected at the U.S. Geological Survey Library, Building 25, Federal Center, Denver, Colo. 80225, and at the U.S. Atomic Energy Commission Office, Grand Junction, Colo. 81501.
