Map showing locations of holes drilled in 1949 and 1950
by U.S. Geological Survey, Northwest Carrizo area,
Apache County, Arizona

From December 13, 1949, to January 6, 1950, the U.S. Geological Survey drilled 24 diamond-drill holes in the Northwest Carrizo area, Apache County, Arizona, to explore for uranium-bearing deposits. The deposits are primarily in the upper part of the Salt Wash Member of the Jurassic Morrison Formation.

An index map showing the location of the area explored is combined with a map showing locations of drill holes (fig. 1). Logs of 24 holes identified on the accompanying map may be inspected at the U.S. Geological Survey Library, Building 25, Federal Center, Denver Colo. 80225, and at the U.S. Atomic Energy Commission Office, Grand Junction, Colo. 81501.
