# BIBLIOGRAPHY OF THE GEOLOGY AND MINERAL INDUSTRY OF LIBERIA AND ADJACENT COUNTRIES

by

Donald H. Johnson and Richard W. White

U.S. Geological Survey

January 1969

## INTRODUCTION

This compilation represents an attempt to list, as nearly as possible, all references pertaining to the geology and mineral industry of Liberia, and to indicate those that are held by the library of the Liberian Geological Survey. The bibliography is a contribution of the Geological Exploration and Resource Appraisal program, a combined effort of the Government of Liberia and the United States Agency for International Development, carried out jointly by the Liberian Geological Survey and the United States Geological Survey.

The references were compiled from many sources, including the card catalog of the U. S. Geological Survey library in Washington, the holdings of the Liberian Geological Survey library, various published bibliographies, references cited by authors of publications dealing with Liberian geology, and chance encounters in the literature. The list is admittedly incomplete, and readers are requested to call additional references to the attention of the compilers.

References to mining, metallurgy, and mineral economics involving Liberia have been included, as have papers dealing with physical geography, cartography, pedology, hydrology and related subjects. Because the present geological knowledge of Liberia depends heavily on comparison with other areas, an extensive list of references to the geology of countries adjacent to Liberia and of the west African region is included.

Because this bibliography has been compiled in part from other bibliographies and authors' citations, and because we have not seen many of the references listed, some of the papers included here may not actually be germane to Liberian geology and mineral industry. Pending further evaluation, we have included all such dubious references so as not to miss inadvertently a useful paper. For similar reasons we have listed a number of references for which such information as publisher, volume number, pagination, or date of publication is lacking.

The listing is strictly alphabetical by author, with no attempt at segregation by country, subject, or other criteria. Publications held in the library of the Liberian Geological Survey in Monrovia are marked with an asterisk. An effort is being made to increase the library holdings through purchases, exchanges, and gifts.
