Area unfavorable for recharge operations and cyclic storage because of underlying fine-grained material of low specific yield (e.g., and in places c Alcl, see Fig. 13).

Area unfavorable for recharge operations and cyclic storage because of extensive beds or lenses of virtually impermeable material either at land surface or at shallow depth (flood basin deposits and lacustrine and marsh deposits, see Figs. 7 and 11).

Area unfavorable for recharge operations and cyclic storage because of shallow depth to water (where data are inconclusive).

Boundary of the Fresno area.
