

PERCENTAGE OF COARSE - TO FINE-GRAINED MATERIAL

EXPLANATION

<p>Upper limit of specific yield for any facies Deposit consisting of coarse-grained material of 25 percent specific yield and of fine-grained material of 3 percent specific yield</p>	<p>Plots of calculated specific yield and of facies for wells located in T. 14 S., R. 21 E. and T. 15 S., R. 24 E.</p>
<p>Lower limit of specific yield for any facies Deposit consisting of coarse-grained material of 10 percent specific yield and of fine-grained material of 3 percent specific yield</p>	<p>Mostly cemented sand</p>

FIGURE 16. Diagram indicating relation between facies and specific yield in the Fresno area.
