Strait of Juan de Fuca
Pacific Ocean
EXPLANATION
G
Area of good ground-water potential. Most wells would probably yield more than 25 gpm. Locally, yields could be as high as several hundred gallons per minute.
M
Area of moderate ground-water potential. Most wells would probably yield from 5 to 25 gpm. However, from some the yield would be insignificant.
P
Area of poor ground-water potential. Few wells would yield as much as 5 gpm, and from most the yield would be insignificant.
Location of well for which log is given in table 5.
Location of test-hole for which log is given in table 5.
Location of test hole for which log not given, owing to insufficient depth and data.
3 test holes, 2 with logs
