EXPLANATION

Contour showing thickness of material overlying the principal clay deposit.

This map shows the distribution of the principal clay deposit and the thicknesses of the material overlying it. The map is intended to show the general distribution of the deposit, but it does not provide detailed information about specific features or contours. The map is useful for understanding the overall extent and thickness of the deposit in the area.

Small, isolated deposits of clay not associated with the principal deposit are indicated with the contour lines.
