GEOLOGICAL SURVEY

EXPLANATION

Areas shown on the map have a 1 in 50 chance on the average of being flooded during any year. The areas were delineated for natural conditions but where necessary were adjusted for the effects of channel improvements that existed in 1972.

Smaller areas within those shown have a greater than 1 in 50 chance on the average of being flooded during any year; some areas immediately adjacent to stream may be flooded almost every year. Larger areas outside those shown have a less than 1-in-50 chance on the average of being flooded during any year.

Depth and duration of flooding are not indicated

PREPARED IN COOPERATION WITH
CONNECTICUT DEPARTMENT OF
ENVIRONMENTAL PROTECTION

Base is USGS Ellington Quadrangle

ROAD CLASSIFICATION
Primary highway all weather hard surface
Secondary highway all weather hard surface
Light duty road all weather improved surface
Unimproved road fair or dry weather
