PRELIMINARY GEOLOGIC MAP OF THE CROTON 1 NW QUADRANGLE, CAMPBELL COUNTY, WYOMING

By
E. J. McKay

EXPLANATION

- | | | |
|--------------|--|------------|
| Qa | ALLUVIUM (HOLOCENE)--Unconsolidated silt and sand on the flood plains of the largest streams. Includes some slope wash locally | QUATERNARY |
| Q1 | LANDSLIDE MATERIAL (HOLOCENE) | |
| Tu | WASATCH FORMATION (EOCENE)--Yellowish- and light-gray friable generally fine- to very fine-grained sandstone, medium-gray mudstone and claystone, brown carbonaceous shale, and coal. Contact with the underlying Fort Union Formation drawn approximately at the base of a sequence several tens of feet thick of crossbedded fine- to locally medium-grained sandstone | |
| UNCONFORMITY | | TERTIARY |
| Tfu | FORT UNION FORMATION (PALEOCENE)--Light-gray and very light yellowish gray slabby very fine grained sandstone and siltstone, medium-gray mudstone and claystone, brown carbonaceous shale, and coal | |

- | | |
|--------------|---|
| --- | Contact--Approximately located. Dotted where concealed. Not shown in areas where rock is extensively altered by the burning of coal |
| U D | Fault--U, upthrown side; D, downthrown side |
| Ag Fry | Outcrop of coal bed--Drawn on base of the coal. Dashed where approximately located; dotted where concealed. Number identifies location of measured coal section shown on sheet 2. Bed name queried where correlation is uncertain |
| --- | Outcrop of burned coal bed--Dashed where approximately located. Dotted line shows limit of rock altered by burning of the coal |
| + | Drill hole--Showing holes for which thickness and depth of coal have been determined as shown in table 1 (sheet 3) |
| 4080 4040 | Structure contours--Drawn on base of Dietz coal bed |
