<sup>1/</sup> Other minerals include zircon, sphene, calcite, allanite, chlorite.<sup>2/</sup> Color index is defined as the total percent of dark minerals (biotite, amphibole, pyroxene, garnet, opaque oxides) in a rock.<sup>3/</sup> Meladiorite - color index >40; leucodiorite - color index <25; leuconorite - color index <40;

hbl. - hornblende; bio. - biotite; hyp. - hypersthene; pyr. - pyroxene; gar. - garnet.

<sup>4/</sup> Includes 0.5 percent colorless amphibole.<sup>5/</sup> Predominantly brown hornblende.<sup>6/</sup> Not determined.<sup>7/</sup> Sample from dike possibly related to diorite pluton.

NOTE: Between 500 and 600 points were counted on each thin section.
